The Technology You Need to Help Build a Successful Music Program

Complete Music Labs
for Any Classroom Setting

Essential Guides

From the latest iOS technology to choosing a digital mixer — see page 2 for details.

(800) 822-6752
Sweetwateredu.com

Welcome to the Fall 2016 edition of Sweetwater's *Music Educators Technology Resource*, or *METR*. As a music educator, you have specific needs when it comes to your program, your school, and your students. We've used our decades of experience working with educators to tailor this directory of music and audio technology to meet those needs. I hope that you find it useful and that you enjoy browsing through these pages.

We're living in a "golden age" for music and audio technology. The array of instruments and tools that are available, the quality of those instruments and tools, and the rapidly dropping prices for technology allow us to educate and inspire in ways that were unavailable just a few years ago. But that same explosion of technology and rapid drops in pricing have resulted in a certainly overwhelming array of options. Having so many possible choices can make it difficult or impossible to make a decision. You want to make the best choice and be a good steward of your school's resources, but how do you decide?

That's where *METR* comes in. For *METR*, we use our experience and knowledge to narrow down the selection, so you can quickly and easily find what you're looking for and feel confident that you've made the right decision. And, if you're interested in something you don't see in these pages, just give us a call; we probably carry it and have it in stock.

We've also included articles and informative "sidebars" throughout *METR*. They'll help you get the most out of the gear you and your students use.

Please enjoy this edition of the *Music Educators Technology Resource*. As always, we're happy to help with any questions or gear needs you might have.

Musically yours,

Chuck Surack
President, Sweetwater

GREAT PRICES

We understand your need to find the best products for your program while working within a budget. That's why we've hand selected a wide range of products — all at great prices that appeal to any budget. There are also special education discounts on many items, available to qualifying academic programs. Call us today for more information.

PERSONAL APPROACH

When you call Sweetwater, you talk to a real person on the other end of the line — a friendly, knowledgeable staff member who really knows music education technology and understands the needs of educators. We're here to help you get exactly what you need, when you need it.

SELECTION

Whether you're equipping your lab, classroom, or stage, we have what you need. And with a huge inventory of in-stock equipment, our selection is second to none! If you don't find what you're looking for in this catalog, then please visit Sweetwateredu.com or call us. We'll make sure you get it.

Dave's
Music Den

GET 10% OFF

PRINTED SHEET MUSIC FOR YOUR PROGRAM

We're proud to have Dave's Music Den operating in-house here at Sweetwater. It's one of just 10 full-line print music stores in the country! Offering everything from jazz band and choral arrangements to notation staves, guitar tablature, and more, Dave's Music Den can provide you with any book or piece of music from any print music publisher in the world. If you're in the area, feel free to stop by Dave's. If you're outside of the area, call the owners, Theresa and Beth, at (800) 852-6883.

IN THE CLASSROOM

iOS SHOPPING GUIDE

The Modern Touch Making Music with iOS Devices in the Classroom

The recent explosion of music-specific apps has resulted in a flood of innovative interfaces, microphones, and other peripherals that turn an already-powerful tablet into a synth, a rhythm programmer, or even a full-on music production studio. The advent of affordable peripheral hardware makes it possible to take full advantage of these tools in your music program.

The advantage of tablets in the classroom setting is obvious: they provide a much more intuitive, flexible, and interactive platform for learning than hard-copy textbooks and workbooks. Tablets make it possible for students to access instant multimedia content as well as immediate, interactive feedback on their own work. As a teacher, whether you're working with theory, notation, composition, or arrangements, you'll see right away what a difference iPads and iPods make on the quality of instruction. App-based synths, percussion, guitar amp models, multitrack recorders, and more open up musical worlds that would be unattainable with their costly hardware equivalents. Now, the arrival of affordable iOS peripherals has allowed teachers and students alike to turn these apps into serious learning, creation, and performance tools.

Now used as everything from interfaces to microphones to docks that add connectivity, new peripherals for iPhones, iPods, and iPads have exploded in number. Plug an inexpensive, simple-to-use stereo mic attachment into an iPod touch, and you have a handheld recorder that's capable of capturing CD-quality audio during performances or rehearsals. A student can dock an iPad to a peripheral loaded with connection options and then plug in microphones, instruments, and even MIDI devices. Several interfaces are available that make ideal additions to your lab,

thanks to compact designs, affordability, and ease of use. Some manufacturers even produce docks that turn an iPad into a fully featured multichannel mixer!

Keyboard, synth, and music-production labs can definitely benefit from controller keyboards and rhythm programmers that integrate with iOS devices. Many of these controllers also work with computer-based instruments and even outboard MIDI gear. This flexibility helps to keep costs down in the lab and gives students access to programs, instruments, and apps they may otherwise not get.

Students aren't the only ones who benefit from the portability and power that iPads and apps provide. Educators are able to put apps to use as teaching aids and organizational tools. Some apps help teachers track their students' progress. Others actually allow instructors to view presets, set lists, instruments, and other information during classroom activities and performances — all in real time. Several of the latest live sound systems work digitally and come complete with apps that allow for remote iPad-based command over critical mixing functions. This means the teacher can be practically anywhere in the room during a recital, a performance, or an event and always be in control of the house sound system. Some mixing systems even allow students to use their devices to control individual monitor mixes during performances.

Gear, software, and instrument needs vary widely among programs, as do teaching tools. This makes the implementation of iOS devices and peripherals in the classroom or lab an attractive option. Call us today, and we'll help you find the solutions that fit your program and budget best.

PreSonus AudioBox iTwo
2-channel Audio Interface with Software

Whether your students are producing music on a Mac, PC, or iPad, the **AudioBox iTwo** makes an ideal addition to your lab. This 2-channel USB interface includes two premium microphone/instrument preamps, high-resolution recording quality, and easy-to-navigate controls. The AudioBox iTwo comes complete with Studio One Artist production software.

AudioBoxiTwo 2-ch USB Interface...List \$199⁹⁵ **ONLY \$10/mo. \$149⁹⁵**

iRig PRO DUO
2-channel USB Interface with Optional Battery Power

The **iRig PRO DUO** makes a powerful recording solution for Mac, PC, iOS, and Android devices. Despite its compact size, this 2-channel interface doesn't skimp on the features you need with inputs for mics, instruments, and line-level signals — plus balanced outs, a headphone output, and even MIDI I/O. You can

power it via USB or with two AA batteries, for true portability.

iRigProDuo 2-ch USB Interface...List \$199⁹⁵ **ONLY \$10/mo. \$199⁹⁵**

SHURE MVi
USB/iOS Interface with DSP Presets

Shure's **MVi** audio interface proves that you don't need big, expensive gear to make great-sounding recordings. A standard USB cable connects the MVi's XLR combo mic/instrument input to your lab's recording software. The Class A preamp includes phantom power, so you can use studio condenser mics. Five onboard DSP presets let students tune their recording sound to suit their source, while an integrated headphone output provides zero-latency monitoring. The MVi also comes with a Lightning cable, so students can use it with iOS devices and take a quality recording rig anywhere they need it.

MViLTG 1-ch USB Interface w/Lightning...List \$162⁹⁹ **ONLY \$10/mo. \$129⁰⁰**

Focusrite iTrack Dock
2-channel Docking iPad Recording Interface

Now, your students can enjoy recording straight into an iPad and plugging into Focusrite quality. The **iTrack Dock** features a pair of premium preamps, 24-bit/96kHz recording capability, and even a USB input for keyboards and controllers. This affordable interface comes equipped with a Lightning connector for the latest iPads.

iTrackDock iTrack Dock...List \$249⁹⁹ **ONLY \$10/mo. \$149⁹⁹**

KORG nanoKONTROL Studio
USB/Bluetooth LE MIDI Control Surface

The **nanoKONTROL Studio** control surface lets you take hands-on command of music production on your laptop or iPad — wirelessly. Eight sliders, eight knobs, and 32 buttons provide access to volume, pan, mute, solo, record, and other controls. The transport section includes a smooth jog wheel for searching and scrubbing, plus marker placement and other essential navigation tools. Bluetooth LE draws less power from your device than standard Bluetooth, for longer sessions and lower battery drain.

nanoKONTStu 8-fader Control Surface...List \$180⁹⁹ **ONLY \$10/mo. \$149⁹⁹**

iRig PADS
16-pad USB MIDI Controller

IK Multimedia's **iRig PADS** portable MIDI groove controller gives your students flexible management over music-making software on Macs, PCs, and even iOS devices. Use the **iRig PADS** controller to trigger loops and grooves, or use the included music production software to create tracks. This amazing, affordable unit comes packed in a compact format you can use in the music lab, the rehearsal room, onstage, and more. Call us today and get all the details.

iRigPads USB Controller...List \$180⁹⁹ **ONLY \$10/mo. \$149⁹⁹**

iRig KEYS + iRig PADS Bundle
37-key USB/iOS Controller and 16-pad Controller

Instant synth lab station! The IK Multimedia **iRig KEYS + iRig PADS Bundle** includes the **iRig KEYS** 37-note controller keyboard, which works with your Mac, PC, or Lightning-equipped iOS device, and the **iRig PADS**, which provides you with 16 multicolor performance pads and assignable knobs, buttons, and a slider that you can use with the included SampleTank software or virtually any iOS music app you like.

iRigKeysPads iRig KEYS + iRig PADS Bun...List \$249⁹⁹ **ONLY \$10/mo. \$199⁹⁹**

novation Launchkey Mini
25-key USB/iOS Controller

The Novation **Launchkey Mini**'s 25 velocity-sensitive keys give students two octaves to play with, and they can use the 16 pads to trigger loops, tap out drums, and more. Navigation controls provide advanced integration with Ableton Live, and this controller also works with other major DAWs. Use the Launchkey Mini with a Mac, a PC, or an iOS device.

LaunchK2mini 25-key USB/iOS Controller...List \$124⁹⁹ **\$99⁹⁹**

LINE 6 SonicPort VX
Mac/PC/iOS Interface with Built-in Mics

Versatile, affordable audio interface! The Line 6 **SonicPort VX** plugs into your music lab's Mac, PC, or iOS device. This interface includes instrument and auxiliary inputs as well as onboard microphones, for outstanding multitrack recording options. The SonicPort VX comes complete with a free Mobile POD app that lets students work with an array of virtual guitar amps and effects. Mic stand mounting hardware is also included.

APOGEE Jam 96k
Guitar Interface for iPhone, iPad, and Mac

Apogee's **Jam 96k** brings amazing 24-bit/96kHz sound quality to your iOS device or Mac. Just plug a guitar in and go. The Jam 96k works seamlessly with most iOS guitar effects and recording apps, giving you limitless options right out of the box. Students can easily adjust levels with the control knob, boosting your signal by up to 40dB. This incredible interface turns an iOS device into a handy rehearsal tool, and students can easily record studio-quality audio on portable devices or your music lab's Mac. The even more affordable **Jam** is also available.

iKlip Xpand
Universal Stand Mount for Tablets

The **iKlip Xpand** is a spring-loaded clamp that comfortably expands to fit virtually any mobile tablet, including iPad, iPad mini, and various Android platform models. Better yet, you and your students don't even have to take off the tablet's protective case.

You can attach your iKlip Xpand to just about any microphone stand, boom arm, or similar type of stand. And thanks to iKlip Xpand's locking ball joint, students can comfortably tilt, angle, and orient the tablet however they like.

\$49⁹⁹

iKlipXpand iKlip Xpand.....

SHURE MV51
USB/iOS Condenser Mic with Five Recording Modes

The **MV51** large-diaphragm USB condenser mic captures speech, vocals, acoustic instruments, and more, and it's amazingly easy to use. Beneath its retro-modern housing, the MV51 offers five different recording modes, so students can easily optimize the mic for instruments, vocals, and more. An onboard headphone jack allows for latency-free monitoring, while simple, clear controls provide easy access to the MV51's functions. A built-in kickstand makes this mic perfect for desktop use in the lab or during lectures. You can also mount the MV51 on a microphone stand for optimal placement.

AN EXCLUSIVE ARTICLE FROM SWEETWATER

The Modern Music Lab

An Interview with Vern Crews, Sweetwater Music Education Technology Division Director

School music labs allow students to develop skills, learn techniques, and actively participate — in the classroom, on the stage, and behind the scenes. Vern Crews, Sweetwater's Music Education Technology Division Director, tells us about different types of music labs and how Sweetwater can help you tailor your lab to your school's needs.

What types of music labs do schools use?

Generally there are three. There's the traditional piano or keyboard skills type of music lab, where the primary focus is on playing the piano. These may be centered around a controller or a music lab conference system. Then there are labs that focus on general music — music theory, ear training, composition, notation, and arranging. These may also focus on a central music lab system, but today we're incorporating more lesson-based software programs. The advantage to these systems is that they provide the instructor with self-assessment tools, record keeping, grading, lesson plans, lesson development; it's all software based. Then we move into music technology. I prefer to refer to it as "technology as it relates to the performing arts," because it's not always about the performance aspect. Often, it's also about what goes on in the background. For every performer, there are several people in the background that are responsible for the production of the performance. I think that's key to enlisting students into the performing arts program, because with technology, we're finding the ability to tap into the creative minds of kids who may not take the path of a traditional musician with formal lessons.

What makes music lab systems with central control so useful?

Music lab systems provide the instructor with a one-on-one ability to communicate with individual students within large group settings, without disturbing the class or involving the whole class. One challenge is that, in a group or a class setting, not everyone is moving at the same pace; not everyone is arriving with the same skill set or the same knowledge base. A

lab system allows the teacher to create groups of students who can work with each other while not necessarily impeding what's going on around them with the other students.

How can Sweetwater help educators and programs choose and build labs?

One of the unique things that Sweetwater brings to the table is our experience in music technology and in education. We help to create and provide solutions as music technology changes, as the needs of the classroom change, as the roles of the students change. We're able to keep pace with that because of our singular focus.

What kinds of things can you do to configure a lab setup?

We can assist the instructor or the administration in establishing the goal for the lab and help with the design from the ground up. We can help them to create an environment and save money by incorporating all three different aspects of what one might think a lab would be. We could provide 88-key keyboards for a piano-based lab that would also be appropriate in a general music classroom situation and a music technology situation. We can assist them in choosing software for the right grade levels and skill levels and help to develop programs that start out in elementary school and move through junior high and all the way through high school. Sweetwater also has an award-winning technical support staff that's there for them throughout the process. With the exception of physically being there ourselves, we can help them soup to nuts.

CALL US TODAY, AND WE'LL HELP YOU CONFIGURE A
MUSIC LAB THAT FITS YOUR PROGRAM'S NEEDS.

(800) 822-6752

“We help to create and provide solutions as music technology changes, as the needs of the classroom change, and as the roles of the students change.”

— Vern Crews, Director of Sweetwater's Music Education Technology Division

LC4 WIRELESS
CONTROL KIT**

LC4 Base

Modular System for Musical Instrument Labs

Yamaha's **LC4 Base** music lab system provides music educators with an intuitive, flexible way to teach a musical instrument to a group of students — all at once, in smaller groups, or one-on-one — all without ever leaving the front of the classroom. Expandable to accommodate classes as large as 48 students, the LC4 Base uses a network of headphones and microphones to make it seem as if each student is isolated in his or her own practice room — ideal for private practice or one-on-one instruction with the teacher. But, with the touch of a button, the practice room walls can be instantly removed for group study, teacher-only broadcasts, or “all together now” ensemble performances. Instructors even have a mute button that disables the students' instruments when it's time to pay attention.

An impressive expansion kit adds everything necessary to create eight more student stations. In fact, the system's Mega Group feature connects up to 48 students at the push of a button! Coming soon, the optional LC4 Wireless Kit will allow you to control the lab with an iPad. The exclusive LC4 Control App lets you position student icons in the app to match the physical layout of instruments in your lab. All student icons are selectable from one convenient interface as opposed to scrolling through banks eight at a time. Yamaha headsetsets provide excellent isolation from outside sounds and are also available individually, so you can easily expand individual workstations from one to two students.

30-student/1-teacher Music Lab System for Web-based Curriculum

Get connected to a powerful music lab system your students will love! The **microLAB Online** includes 31 stations, each equipped with Korg's outstanding 37-key microKEY controller and a great-sounding set of headphones. The microKEY controller connects to your lab's computers via USB — no external power source required. Plus, these easy-playing controllers are ready to use as soon as you plug them in. Each microKEY features velocity-sensitive keys, octave-shift and transpose functions, pitch-bend and modulation wheels, and more. You also get a full year of access to the Music Learning Community website, which gives students fun, effective learning opportunities — and gives teachers the assessment tools they need.

ONLY \$128/mo.

JamHub®

JamHub Series Silent Rehearsal Studios

The old adage “practice makes perfect” certainly holds true when it comes to music education. And if your students practice as effectively as possible, then they’ll improve even faster. That’s why we’re very excited to show you these JamHub silent rehearsal studios. If you teach modern instruments, such as electric guitar, bass, and percussion, then you can certainly benefit from having a JamHub in the classroom. But you’ll also find that JamHubs are equally valuable for working with choirs, holding ensemble rehearsals for musicals, and much more. Many instruments, such as the guitar and the bass, have

affordable equipment available that not only provides the sound of classic amplifiers and effects but also offers a headphone output, so it’s easy to practice at any hour. Electronic drums offer that same benefit to drummers. The JamHub makes it easy to plug in and connect these different sound-making devices. What’s more, the JamHub lets students take control of exactly what they hear in their headphones. Using a JamHub, students can personally control the levels they hear from the other students.

There are three JamHub models available. The 7-section **JamHub TourBus** is designed to accommodate six plugged-in students. It features a built-in recorder, so students can easily review a piece they’ve just played. The similar 7-station **JamHub GreenRoom** features six student sections and one recording section. Instead of having a built-in SD recorder, the GreenRoom features a USB output for recording right to a computer. The most compact unit is the **JamHub BedRoom**. It features five sections: four for students and one with a recording output for plugging into an audio interface or a handheld recorder. And with the **SoleMix Remote**, you can control any of the JamHub units from a distance.

that transforms live audio into fully editable 24-bit multitrack sound files. This compact recorder easily connects to a mixer (or JamHub studio via its SoleMix remote jack) and records seven stereo sections while giving students independent monitor mixes. A stereo cable kit, a headphone extension kit, and packs of special closed-back headphones are also available. Call us today and find out more!

Roland

HS-5

Multi-station Personal Mixer with Recorder

Roland’s impressive **HS-5** session mixer is a fantastic tool for your school’s music lab — and the perfect practice companion for student ensembles. The HS-5 allows up to five musicians to rehearse with headphones. Plus, this compact and easy-to-use mixer lets students adjust their headphone mixes individually, so everybody can rehearse effectively.

The HS-5 will effectively reduce the amount of clutter in your lab or rehearsal space, and it will definitely cut down on the noise level. Given its conveniently small footprint and budget-friendly price, this feature-packed mixer makes a great addition to any program.

The HS-5 comes loaded with incredibly authentic COSM amp models for guitar and bass, allowing players to connect their instruments directly to the mixer — no need to lug a heavy amp to the lab or the rehearsal room! The HS-5 also allows players to control the amount of distortion and compression they want, and equalizer and pan controls provide the sound and listening space students feel most comfortable with.

This amazing mixing station also gives you another handy option: It lets you make stereo recordings and save them to a thumb drive! Or, you can connect the HS-5 to your lab’s computer for multitrack recording. Call Sweetwater today and find out more about the HS-5!

DGX-660

88-key Keyboard with USB Recording/Playback

Yamaha's **DGX-660** offers an array of great-sounding instruments, effects, and styles. You and your students will appreciate the natural feel of Yamaha's GHS Weighted Action keybed, while the Pure CF Sound Engine delivers the sound of a world-class 9' Yamaha CFIIS concert grand. A Piano Room feature gives you a selection of fine pianos and ambiances to customize your piano sound (it even lets you adjust the lid). Built-in speakers give you full, natural stereo sound — without the need for an external sound system. Students can even plug a microphone into the DGX-660 and sing along with their playing; you'll hear the vocal through the onboard speakers and be able to record the performance to USB audio. The optional UD-WL01 WiFi adapter allows you to stream audio and MIDI to and from your iOS device running Yamaha's compatible apps. Score Display scrolls MIDI song notation on the DGX-660's LCD screen, so you can easily sharpen your reading skills. A matching stand, music rest, and footswitch are included. This keyboard is also available in white.

DGX-660 Features:

- 88 GHS Weighted Action keys
- 554 voices, 205 styles
- USB audio recording/playback
- Microphone input
- Wi-Fi streams audio/MIDI to and from iOS device (requires optional UD-WL01 USB-WiFi adapter).

KEYBOARDS SHOPPING GUIDE

Choosing the Right Keyboard

**Korg
Kronos**
61-key Workstation
\$2999⁹⁹

TO LEARN MORE,
GO TO PAGE 18.

Almost universally, the keyboard is the first-call musical instrument in the classroom. You can use it for everything from teaching parts to the choir to backing up musical theater productions to developing new ensemble arrangements. And with the recent growth of affordable keyboards and music lab technology, many schools have also been able to bring keyboards closer to students, leading to hands-on music theory training, effective in-class piano technique lessons, and exciting music creation projects.

Because of all the different potential applications of keyboards, there is a wealth of instruments available. To help you navigate the vast selection of keyboards available, we've outlined many of the most important factors for you to consider when choosing a new keyboard. Of course, if you have additional questions about which keyboard is right for your program, be sure to give your Sweetwater representative a call — we're happy to help!

Choosing the Right Keyboard Action

The feel and response of a keyboard's keys, or its "action," is one of the most important factors to consider when choosing a new keyboard. There are three different kinds of action available: fully weighted action, semi-weighted action, and synth action. If you're choosing a new digital piano to serve as your main performance instrument or for classroom accompaniment, then you'll most likely want fully weighted keys. These keys are designed to give you the natural feel, touch, and response of an acoustic piano; anyone can sit down, play, and feel right at home behind the keys. When you're equipping a multipurpose music lab, though, semi-weighted action may be a better option. This action strikes a nice

balance between the heavier keys of weighted-action keyboards and the lightweight keys of synth-action keyboards. Students learning to play the piano will still enjoy a piano-like playing experience, but their fingers won't tire as easily. You'll also find that these kinds of keyboards nicely double to serve music production needs that require quick synthesizer-style playing. Finally, if your music lab is more for learning music theory, understanding chords, and interacting with music education software, then a smaller-sized synth-action keyboard controller may be just fine.

Considering Keyboard Size and Portability

As you determine the right kind of key action for your school's needs, you'll also want to consider size and portability. Keyboards tend to range in size from 25 keys all the way up to a traditional acoustic piano's 88 keys. So, if you're replacing the upright in your classroom in favor of a digital piano, then you'll probably want to choose an 88-key instrument. A 76-key keyboard may be a great option for your show choir's backup band or for your school's keyboard instruction lab. These instruments feature a slightly reduced range, so they're smaller, lighter in weight, and more affordable — and most players don't use the highest and lowest keys anyway. If, however, you're outfitting a music theory lab or making an existing computer lab double as a music lab, then a portable and affordable 25-key controller may be just the ticket.

Making Sure You Have the Sounds You Need

After you've landed on the right size and feel for your digital keyboard, you'll want to think about what kinds of sounds you need. Do you need just a rich grand piano sound for your classroom? Or do you need to accompany musical theater productions with a range of sound effects and instrument voices?

Instruments in the digital piano category tend to offer a great piano sound or two — perfect for the music lab — whereas digital stage pianos add commonly used voices, such as strings, organs, electric pianos, and synthesized pads. For the biggest selection of sounds, keyboard workstations are a great choice. Not only do they offer a comprehensive collection of instrument voices, but they also offer up more-advanced features, so you can program sequences and record your own sounds and effects, which we'll discuss a bit more in the next section.

Convenient Extras, Including Arranging, Sequencing, and Recording Features

Here's where digital keyboards can really shine when compared to their acoustic counterparts. Being digital, many keyboards offer up a ton of extra tools that are great for teaching and learning. For example, a built-in metronome is exceptionally useful in keyboard instruction labs and when you're rehearsing pieces in the classroom. Many keyboards even offer rhythm tracks, which will play at the tempo you've designated, creating a band-like playing experience and making it fun for students to rehearse songs in time. You may also want to consider a keyboard that has a built-in 2-track or 4-track recorder. With it, students can easily capture a musical idea and then hear it played back. Or they can record a basic chord progression into the keyboard and then listen back and try to play along or work on improvising a solo over the top of it.

As an educator, you may want to take onboard rhythm and recording features one step further by choosing a more robust keyboard workstation, which we briefly mentioned earlier. This kind of all-in-one instrument lets you record many tracks and then edit and sequence all of them into full productions — perfect for creating backing tracks for the choir or for building new arrangements. Best of all, you'll be free to work independently of a computer, but you'll also have the option of connecting to a computer to easily transfer your files and email them to your students or burn them to a CD.

The Need for Computer Connectivity

For lab keyboards, one of the most important factors to consider is computer connectivity. Even if you don't think you'll want to connect your classroom keyboard to a computer, allowing the connection keeps you open to future enrichment activities and teaching methods. For the most convenient computer connectivity, you'll want to look for either MIDI or, better yet, USB.

Five Main Types of Digital Keyboards

1. MIDI CONTROLLER

It features piano-style keys and tactile control surfaces. It's great for interacting with music education software and for controlling virtual instruments.

M-Audio Code 61

Roland

FA-08

88-key Keyboard Workstation with Sequencer and Sampler

Whether you're using it as a learning tool in the classroom or music lab or as a performance keyboard for live events, you'll get everything you need out of the 88-key **FA-08** workstation. With its easy-to-navigate interface (complete with a color LCD screen) and well-placed controls, the FA-08 keeps clutter to a minimum. Students will love this keyboard's natural playing feel, which lets them get the most out of more than 2,000 sounds taken straight from Roland's Integra-7 sound module, including the complete SuperNATURAL synth engine. The onboard 16-track sequencer allows for continuous loop recording so that your students can quickly assemble songs, and a host of studio-grade effects adds polish to the already stellar sounds. The FA-08 even includes a built-in sampler with 16 backlit pads. You can export your tracks to your lab's computer as multitrack audio or MIDI, or you can save them to SDHC media as stereo mixes.

YAMAHA

Montage Series

Synth Workstations with Two Synth Engines and Control Matrix

Expand your synth lab's possibilities! Built on the legacy of Yamaha's groundbreaking DX and Motif keyboards, the Montage series synthesizers are driven by a programmable Motion Control matrix, which gives you fluid, interactive command over two powerful synthesis engines. Your fingers will fly on the **Montage 6's** superb aftertouch-enabled, 61-note FSX semi-weighted keybed, as you modulate multiple parameters in real time with the aptly named Super Knob. With dedicated front-panel controls, Motion Sequences functionality makes it easy for you and your students to manipulate and morph patches in real time. Each Montage synth also includes an onboard Envelope Follower, outstanding modern and vintage-style effects, and 1.75GB of Flash memory for your own samples or Yamaha synth libraries. The 76-key **Montage 7** also features FSX semi-weighted keys, while the **Montage 8's** 88 keys sport fully weighted Balanced Hammer action with aftertouch.

- 1.75GB of integrated Flash memory
- Full-color user interface display

MOXF8

88-key Synth Workstation

The 88-key Yamaha **MOXF8** is as effective in front of the choir or band as it is in the music lab. That's because this instrument strikes a great balance between the classic and the modern. You'll find grand piano sounds and essential electric piano sounds, but the extensive sound library is also infused with sophisticated synth sounds and modern drum kits for creating music in today's popular styles. The MOXF8 is a fun choice for students to get creative with, but it's also ready to back up your show choir or your next theatrical production. An onboard 16-track sequencer gives you standalone production capability, while USB connectivity, a suite of software synths, and a DAW program let you plug into your lab's computer and get even more out of the MOXF8. This keyboard has a graded hammer-

KURZWEIL® PC3K6

It's the sound. 61-key Synth Workstation

If you're looking for a great-sounding keyboard with a diverse range of instrument sounds, then the **PC3K6** from Kurzweil has just what you need. It's perfect for music labs and composition classes as well as live theatrical productions that require access to a wide selection of highly realistic sounds. Its 61 semi-weighted keys give students great playing feel. And the PC3K6's capability to load legacy K Series sound banks gives you access to most of the great sound libraries that have made Kurzweils the keyboards of choice for Broadway musicians. Your students can create dazzling sounds by taking advantage of the PC3K6's effects engine, and its onboard sequencer lets them arrange compositions. Plus, the PC3K6 comes equipped with a handy USB port, so students can easily load or retrieve data via a flash drive.

KURZWEIL® SP5-8

It's the sound. 88-key Stage Piano and MIDI Controller

Kurzweil's **SP5-8** provides the premium sounds, playing feel, and features your program demands. You get several of the best sounds from Kurzweil's acclaimed PC3 Series, including the KB3 organ and a world-class string section. The SP5-8 is also a fully featured MIDI controller, so it's perfect for both performances and labs. The SP5-8's feel will let you and your students play virtually any style, as Kurzweil's LK40GH fully weighted action balances the traditional feel of a piano with the speed needed for playing synths, organs, and other keyboard instruments. The even more affordable **SP4-8** features dozens of premium instrument sounds, great playing feel, and more — all in a conveniently lightweight package.

Sub 37 Tribute Edition

37-key Analog Synth

Bring authentic Moog sound and tweakability to your program, with the 37-key **Sub 37 Tribute Edition**. This outstanding synth is much more than a Sub Phatty with an extra octave of keys; you get more voices and presets plus a syncable arpeggiator and step sequencer. The Sub 37 Tribute Edition gives students a huge sonic playground, thanks to its front-panel array of 40 knobs and 74 switches. You also get a pair of modulation buses — complete with assignable source and destination.

This 2-note paraphonic synth's aftertouch-equipped keyboard even allows you to play two notes at a time. Add individual cuts for the mixer section and a Feedback function, and your students will be able to dive deep into sound creation. The Sub 37 Tribute Edition also features modern touches, including 256 presets and an easy-to-read LED display.

Pocket Operator Series

Compact Melody, Bass, and Drum Synthesizers

An affordable and incredibly fun way for students to work with synthesizers! Teenage Engineering's Pocket Operator series synths offer serious sound-shaping options, onboard effects, and more — in minimalist, compact packages that make synth tweaking easy and enjoyable.

The no-frills design allows Teenage Engineering to put quality where it counts: in premium components. The result is an intuitive mini synth at a great price (complete with audio/sync inputs and outputs). Choose among the **Pocket Operator PO-16 Factory** melody synth, the **Pocket Operator PO-12 Rhythm** groove production synth, and the **Pocket Operator PO-14 Sub** bass synth.

Want to protect your Pocket Operator? There's a specialized case for each model. These cases allow access to all the controls and input and output jacks. Call us today and get all the details on the Pocket Operator series synths.

OP-1

Portable Synth, Controller, and Sequencer with Effects and Expansion Options

Like all of Teenage Engineering's products, the **OP-1** combines an innovative approach with intuitive operation — and a healthy dose of fun. And, thanks to optional battery power (it can run for up to 16 hours on a single charge), this ultra-portable synth is at home anywhere you need it. The OP-1 makes learning and working with synthesis enjoyable, but make no mistake: this is a formidable machine that's capable of serious sound tweaking. Loaded with 24 voices, eight synth engines, a flexible sequencer, and a 4-track virtual tape machine, the OP-1 gives your students plenty of ways to fuel their creativity. Connect the OP-1 to your lab's computer and move audio files to and from the synth with drag-and-drop ease. Sample audio from the onboard mic or via the built-in FM radio. Plug in headphones for monitoring, or use the handy built-in speaker. This synth is sure to be a hit throughout your program! Add even more functionality to your OP-1, with an array of useful and fun accessories. Call us today and find out more.

moog Mother-32

Modular Analog Monosynth

Now your students can learn about analog synthesis (and spark their creativity) by getting their hands on a genuine Moog! The semi-modular **Mother-32** makes a fantastic addition to your music lab or classroom. This distinctly vintage voiced, raw, powerful synthesizer boasts switchable lowpass and highpass Moog ladder filters (20Hz-20kHz), a voltage-controlled 32-step sequencer for self-contained programming, MIDI input for external control and MIDI to CV conversion, and a 32-point 1/8" patch bay for interconnectivity-extended synthesis capabilities. In addition to being a desktop-friendly standalone unit, the Mother-32 is also compatible with the Eurorack format.

novation

Launchkey Series

USB/iOS MIDI Keyboard Controllers with Faders, Pads, Encoder Knobs, Transport Controls, and Software

A must-have for labs! **Launchkey Series** keyboard controllers give your students hands-on command over your lab's DAW, virtual instruments, and more, from a very space-friendly format. Novation outfitted these compact controllers with synth-weighted keys, faders, eight encoders, and dedicated transport controls. Sixteen velocity-sensitive, multicolor trigger pads let students play percussion, start loops, and launch clips and scenes in Ableton.

Powered by your lab's computer or even by a student's iPad, Launchkey controllers can easily go from the classroom to the music room and beyond. These affordable controllers come bundled with a software suite that includes Ableton Live Lite 9, Novation Bass Station and V-Station, and a 1GB library of samples from Loopmasters. Available in 61-, 49-, and 25-key versions, Launchkey controllers make a perfect fit for any program.

TRAINING SHOPPING GUIDE

Musical Training Tools

No music program is complete without the proper tools to further students' progress and to help point them in the right direction. You'll find a wide range of software and hardware products available for this purpose, but choosing the right teaching and rehearsal tools can be daunting. Here, we'll address some general categories and give you examples of gear and technology, with training and teaching in mind. And, as always, we encourage you to call us with any questions you may have.

Keyboard and Theory

Music theory and keyboard skills give students essential tools for musical communication. Whether they're just getting started, seeking proficiency on an instrument, or moving into areas of notation and composition, students can benefit greatly from theory and keyboard training software. Teachers also benefit, as training software provides useful exercise tools (some brands even include customizable tests and worksheets). These features let you tailor your program to your students' needs, abilities, and levels of progression. Educational versions in particular offer labor-saving options that help teachers organize and carry out lessons.

Ear Training and Vocal Training

As students progress into ear and vocal training, they need lessons and exercises that they can keep up with — and lessons that can keep up with them. That's why easy customization and flexibility are essential. Many titles let you customize individual levels, so students can learn at their own pace. On-screen piano keyboards allow for easy note identification. Some software titles also allow students to use an external MIDI keyboard to input notes. Being able to plug in a microphone and sing directly into the program is also a great feature. A portable hardware trainer makes a handy option for vocal students; it can be used practically anywhere. Because it's designed

for vocal tracking, a dedicated vocal trainer isn't as "jumpy" as, say, an instrument tuner would be. In addition, a good hardware vocal trainer includes a display that tells students when they're approaching correct pitch — or drifting away. When students have a consistent way to gauge their accuracy, the doors open to improvement and refinement.

Percussion and Drum Training

Whether you choose a single-pad rhythm trainer or a full electronic drum kit, you'll be amazed by the coaching and rehearsal options at your fingertips. Dedicated rhythm trainers offer a compact option, with onboard instruments, metronomes, and an array of rhythm exercises. If you're going for a multipurpose option, then consider a full electronic kit. Most e-kits include training tools right onboard their sound modules, so you get a drum kit that can be used for teaching, rehearsal, and performances.

Guitar Training

Innovative new tools make learning guitar easier and more enjoyable than ever. There are several standalone tools that let you plug in and enjoy built-in loops, songs, effects, and even amplifier emulations. Students can slow down tracks, change pitch to match their guitar's, and even isolate or minimize guitar parts within songs. Computer-based options allow students to work with notation, tablature, and more. Several titles are loaded with progressive learning opportunities, so students at different levels can use the same programs. Advanced designs now allow for an incredible degree of interaction between the guitar and the computer. Specially designed instruments actually display notes and chords right on the fingerboard as students play along with the software. Thanks to this and other incredible technology, students are able to enjoy music programs now more than ever. Call us today to find the training tools that best fit your school.

SINGULAR SOUND **BeatBuddy**

Drum Machine Pedal with 10 Kits, 21 Styles, and 200 Songs

This compact and innovative drum machine is completely controllable with just a tap of your foot. The **BeatBuddy** comes loaded with 200 songs covering 21 different styles, including rock, country, jazz, blues, and more. Perfect for solo performers, singer/songwriters, practicing, and more, the BeatBuddy is easy to operate. Plus, it uses actual recordings and loops from real drummers.

The 2-button **BeatBuddy Footswitch** allows students to get even more functionality out of a great pedal. Use it to scroll through and select songs and presets or to set the tempo of the song with a few taps. Once your song is playing, the footswitch lets

you add accent hits on command, pause the drummer, and more.

DigiTech **Trio+**
by HARMAN

Bass and Drum Accompaniment, Looper, and More

DigiTech's **Trio+** band creator and looper pedal is one of the most powerful practice, writing, and performance tools a budding guitarist can ask for. The basis of the pedal is DigiTech's popular Trio technology; it listens to your playing and automatically adds bass and drum accompaniment. The Trio+ offers 12 genres to suit your playing taste. An onboard looper lets you lay down rhythm guitar parts for each loop, and you can store and sequence these loops any way you choose to build full songs. The more streamlined **Trio** is also available.

BOSS **eBand JS-10**

Guitar Trainer and Recorder with Speakers

Call for Additional Education Discount!

The **BOSS eBand JS-10** gives guitar students access to all the effects, loops, and playback sounds they need. Its pair of speakers allows students to play at a low volume. The eBand JS-10 has both a tuner and a metronome, and it even features an onboard SD memory card slot and a USB port for file playback and recording. During playback, independent pitch and tempo

controls give students the control they need to master difficult parts. Two independent channels, each with an input, make this an ideal collaboration tool. Students can also access 350 built-in loops and 50 complete backing tracks.

BOSS **MICRO BR BR-80**

Ultra-portable Multitrack Recorder

Built on the popularity of the highly portable MICRO BR recorder, the **BOSS MICRO BR BR-80** packs a ton of great practice tools into an ultra-portable device. Three different modes let you choose among 8-track recording and playback, eBand backing tracks (borrowed from the eBand JS-8), and a live recording mode. A pair of studio-quality condenser mics lets you record acoustic instruments, or you can plug in your electric guitar and record direct. On top of that, you get a huge library of rhythm tracks plus Roland's world-famous COSM modeling effects. You can even use the MICRO BR BR-80 as a recording interface. It's a real must-have for any serious music student.

TASCAM **CD-GT2**

Guitar Trainer with CD Player

A great tool for anyone who plays guitar! Beginning students can listen to a favorite song on a CD, decrease the guitar part's speed without changing the pitch, and then remove the guitar sound while they fill in the part. Advanced students can loop parts of songs and perfect any tricky solo or riff. The **CD-GT2** even includes great-sounding built-in effects! Is a part too difficult to play? Students can use the speed controls to slow the part down so that they can really hear what's going on before playing along with it. Then, they can adjust the speed in small increments until the music plays back at full pace.

The CD-GT2 gives students a clean, uncluttered control layout and an easy-to-read display. Its simple operation and range of training functions make this trainer a must-have for any guitar program.

Roland **VT-12**

Vocal Tuner/Trainer with Metronome, Recorder, and Exercises

Made specifically for vocals! Roland's groundbreaking **VT-12** lets students see how sharp or flat they are, with an easily readable display that shows semitone increments. The VT-12 can also detect two vocals at once, so you can work on harmonies in real time. You can even pre-record parts and rehearse with them. The VT-12 tracks pitch and displays it in half-step increments. You get a responsive, illuminated pitch meter plus an intuitive display — with an easy-to-see meter that brightens as students get close to correct pitch and dims as they drift off pitch. A guide tone helps you identify the correct pitch with a range of 24 semitones. In addition to its onboard tuner, recorder, and metronome, the VT-12 gives students a complete vocal method. Available in aqua blue, metallic orange, or black.

FRETLIGHT®
WIRELESS

FREEDOM TO LEARN GUITAR – ANYWHERE!

Fretlight Wireless guitars give your students the freedom to learn and play guitar anywhere. Equipped with a powerful Bluetooth BLE 4.0 receiver, these revolutionary guitar teaching tools stream thousands of chord shapes, scales, inversions, and song maps instantly from a phone or tablet to your Fretlight — no cord or computer required.

Like all Fretlight instruments, these guitars feature an advanced polymer fretboard with bright embedded LED lights to show you riffs, scales, songs, and chord fingerings on the spot. Beginning students will love seeing scales and chords light up on the fretboard — no more looking back and forth between a book and the guitar. And more-advanced players will appreciate how the Fretlight system makes learning new chords and scales fast and easy.

Download chords and scales and watch video instructions via the free iOS and Android apps, or enjoy a growing library of paid apps, such as **Guitar Pro Mobile**, which streams thousands of complete songs to the guitar and lets students jam along at whatever speed they're comfortable with.

Marshall Code 25

Modeling Amp Combo with Onboard Effects and Bluetooth

Marshall's **Code 25** combines legendary Marshall performance with impressive tonal variety and digital convenience. Students can browse over 100 presets for instant inspiration — or mix and match digitally modeled Marshall preamps, power amps, and speaker cab emulations to customize classic tones. This combo's 25 watts of output and a full-voiced 10" speaker make the Code 25 right at home onstage. Bluetooth connectivity lets you change amp settings remotely. Plus, a silent headphone amp delivers big tones, without disturbing other students in classroom or lab environments. The 50-watt **Code 50** is also available.

ALESIS Forge Kit

Electronic Drum Set with 70 Drum Kits and 60 Play-along Tracks

This fantastic electronic drum set makes a great addition to any music program. The **Forge Kit** offers great drum sounds, outstanding playability, and student-friendly coaching options — all at a very affordable price. This kit includes five drum pads: a kick tower with pedal, an 11" dual-zone snare, and three 8" toms. You also get three cymbal pads, including a hi-hat with pedal. A rugged chrome rack holds everything in place, and the included Forge Drum Module offers 70 drum kits, over 600 sounds, and 60 play-along tracks.

You and your students will appreciate the Forge Kit's onboard learning and practice tools. A built-in metronome helps students keep the beat while practicing rudiments, and 60 play-along tracks provide material for students to play to. There's also an 1/8" input that lets students connect a music player and jam along to their own favorites. You can also record practices and performances internally (up to five tracks) or to an external USB memory stick (up to 99 tracks).

ForgeKit Forge Electronic Drum Set... List \$999⁹⁹ **ONLY \$19/mo. \$499⁰⁰**

YAMAHA DTX400K

Compact Electronic Drum Kit with 10 Onboard Kits and 10 Training Functions

When your students play Yamaha's **DTX400K** electronic drum kit, they'll enjoy superb playing feel and great-sounding kits. You'll also love this set's built-in training features and amazingly affordable price.

A conveniently small footprint makes this kit very classroom friendly, but make no mistake — the DTX400K plays and sounds like a full-sized kit. Students can learn to play on the DTX400K and translate their skills to other drum kits with ease. You get natural-feeling 7.5" drum pads, generous 10" cymbals, and an ultra-quiet Silent Kick pedal unit. The DTX400K's 10 onboard kits sound incredible. Plus, 10 onboard interactive training functions (complete with voice guidance) and play-along songs make this kit ready-made for classroom use. You can even download new songs via USB!

Want to put your kit to work in the music lab? Connect the DTX400K's USB MIDI jack to your computer to control your VSTi drum sound libraries and record directly to your DAW. We also offer several other DTX configurations. Call us today to find out which DTX kit works best for your music program.

What is electronic percussion?

The modern crop of electronic drum kits, hand controllers, and percussion pads has come a long way since these instruments were humbly introduced back in the '80s. Featuring such drummer-approved features as mesh pads (for incredibly realistic feel), dual-trigger pads, realistic (and velocity-sensitive!) drum and percussion sounds, cymbals that you can actually choke, and more, these are definitely not your father's electronic drum kits. What's more, these kits include such benefits as silent practice with headphone outputs, built-in rudiment exercises, and portability. And let's not forget the ability you have to adjust your stage volume!

All items on this page are eligible for an additional education discount! Call for details!

Roland TD-4KP

Compact, Easy-to-store Electronic Drum Kit

Want great-playing drums in your classroom, lab, or rehearsal room, but don't have a lot of space to spare? Or do you need one kit you can use for multiple applications? If so, then Roland's **TD-4KP** V-Drums kit is perfect for your program. Its compact footprint and innovative folding design allow for quick setups and tear-downs plus effortless transport and storage. The TD-4KP's powerful TD-4 sound module delivers a broad range of incredibly expressive (and editable) sounds. The TD-4 module also includes onboard Coach and Quick Record/Quick Play features, so your students will be able to play different styles and develop their skills — all on one kit. This kit's integrated pads give students realistic feel and playability, so moving from an acoustic kit or another

ONLY \$27/mo. **\$699⁰⁰** e-drum kit won't be a jarring experience.

TASCAM DR Series Makes Recording for Education Easy

Recording devices are increasingly important tools for music education – perfect for assessment, providing students with instant feedback, creating recordings for parents, and more.

Designed for ease of use and maximum mobility, TASCAM's DR-22WL and DR-44WL hand-held recorders are compact, all-in-one, battery-powered devices with a pair of pro-quality, built-in condenser microphones. And thanks to the onboard Wi-Fi, you can place the recorder where it can capture the best sound and control it remotely; you can even wirelessly transfer recordings to a computer or smartphone without a Wi-Fi router. The DR-22WL and DR-44WL offer a host of other features that make it easy to get a quality recording every time.

Ensemble Recording

You're rehearsing the jazz band or other ensemble, and you want to provide instant feedback and files students can use for practice. To begin, attach a TASCAM DR-22WL to a tripod or mic stand, using the included adapter, and place it where it will best pick up the band with its X-Y recording pattern.

The band may get loud but DR-series recorders can handle that. Using the DR-22WL's Scene Dial, simply select the setting for a loud recording, and the DR sets an optimal input level. For extra safety, the DR-44WL can record two versions simultaneously: one at normal level and one at a lower level in case the trumpet section gets carried away.

Variation on a Theme: Choir Rehearsal

The choir is preparing for their state festival performance, and you're working with individual singers. Set the DR recorder to automatically create a new track every time a level threshold is passed, and whenever a student stops and starts again, you get a new file. When rehearsal's over, use Wi-Fi to wirelessly transfer your files directly to your smartphone.

Recording a Concert

When it's showtime, TASCAM makes it easy to capture the magic by recording concerts as easily as rehearsals so that you can stay focused on the performance. The recorder can automatically add markers when songs begin and end. Later, a File Divide function splits the recording into separate files for each song, and you'll be well on the way to having a live recording for release!

Multitrack Recording

While the DR-22WL features the Scene Dial, the DR-44WL has one more uniquely powerful trick up its sleeve. In addition to the built-in microphones, you'll find a pair of combo XLR/¼-inch inputs that can be recorded simultaneously with the mics. These inputs are handy for recording audience applause, capturing a drum set, experimenting with surround recording, and more.

Your Sweetwater Education Specialist Understands Your Needs

...and how to fit your school's budget. Whether the music department is small or large, your Sales Engineer is ready to help you choose the right TASCAM products for your needs at (800) 822-6752, or visit us at SweetwaterEdu.com.

MICROPHONE SHOPPING GUIDE

Finding the Right Microphones

Microphones are the start of your signal chain — and one of its most critical parts. To get the most out of your lab's recording gear, your school's PA system, or your auditorium's performance amplification, you need the right equipment for the job, and mic selection is the perfect place for you to start.

Although there are many microphones out there to choose from, these devices aren't terribly complicated. And once you understand a few key differences between general mic types, you'll find it a lot easier to make an informed decision. The key is to find the microphone that works best for your particular application. If you need a great-sounding stage microphone, for instance, then it would be wise to choose a model designed with live performance in mind. It will provide optimal sound in a live environment, reject unwanted sound sources, and handle the kind of punishment a more delicate studio-dedicated mic just can't take. When you use the right mic, you get more out of your gear, your program, and your students. Let's find out which mic types work best for different applications.

Shure SM58S

Use this legendary dynamic mic live or in the lab!

\$104⁰⁰

TO LEARN MORE,
GO TO PAGE 48.

Live Vocalists

Though singers sometimes keep the microphone on a stand, they often rely on handheld mics to better communicate with the audience. Dynamic handheld mics offer a great combination of durability and built-in protection against handling

noise, and microphones with cardioid and supercardioid pickup patterns work especially well for vocalists, thanks to excellent rejection of extraneous sounds and feedback.

Headworn microphones work well for dancing

performers or for those who play an instrument while singing. These low-profile units usually use condenser microphones, which provide excellent sound reproduction. Again, it's best to opt for cardioid or supercardioid pickup patterns to keep undesired sounds to a minimum.

Lavalier, or clip-on, mics work well for speech applications, thanks to their excellent sound and low visibility. As with headworn microphones, you should opt for a "tight" pickup pattern, such as cardioid or supercardioid, when you choose a lavalier mic.

Recording Vocals

For recording performers or ensembles in a lab environment, studio-style microphones give you the highest-quality sound. Small- and large-diaphragm condenser mics work with a variety of sound sources. For example, solo vocalists, ensembles, and choirs will all benefit from the combination of warmth and sonic detail that large-diaphragm microphones provide. Though a tight cardioid pickup pattern keeps unwanted sounds effectively at bay, a microphone with a more open, omnidirectional pickup pattern excels at picking up large groups, such as choirs or ensembles.

Acoustic Stringed Instruments

Small-diaphragm condenser microphones work especially well on stringed instruments, thanks to their capability to capture sonic detail.

Piano

Though grand pianos are historically difficult to mic properly, you can find modern mic systems that are designed to sit inside and capture great sound — without the need for ungainly mic stands around the piano. However, if you opt for a conventional miking method, two large-diaphragm condenser microphones inside the piano work well.

Brass/Woodwinds

Both condenser mics and dynamic mics work well on horns and most woodwinds. There are specialized flute mics available, but you can get great results with a condenser mic, provided you aim it correctly at the instrument and avoid getting too much breath noise.

Drums

Dynamic microphones are ideal for bass and snare drums, whereas overhead condenser mics capture plenty of detail from the cymbals. You can use either condenser mics or dynamic mics on the toms.

Amplified Instruments

Dynamic microphones work well on electric guitar amplifier speakers. You can also mic electric bass guitar amplifiers, but it's often more convenient to run the bass guitar through a direct box and then straight into the PA.

POLAR PATTERNS

Microphones vary in how they respond to sound directionally — some mics pick up well from the front but not from other directions. Others pick up well in every direction, and others are somewhere in between. There are four main polar patterns, which describe microphone directional response.

OMNIDIRECTIONAL

This type of polar pattern is essentially a sphere — an omnidirectional microphone picks up well in all directions. The advantage is that the mic will capture the natural sound of the instrument or the voice in the room. The disadvantage is that there's a good chance for feedback to occur if you're not in an isolated situation.

CARDIOID

A mic with a cardioid polar pattern picks up sound mostly from the front, less from the sides, and very little from behind — the polar pattern is roughly heart shaped. This is the closest thing to a "standard" polar pattern. It works well for focusing in on the source you want to mic, and it also works well for preventing feedback in onstage situations.

HYPERCARDIOID/SUPERCARDIOID

As their names imply, hypercardioid and supercardioid polar patterns are extensions of the standard cardioid polar pattern. These tighter, more front-focused patterns

offer better side rejection, but both have sensitive rear lobes that pick up sound, which can make positioning these highly directional mics somewhat tricky.

FIGURE-8

This pickup pattern looks like two spheres that meet at the front of the mic — one sphere in front of the mic, one behind it. The figure-8 pattern rejects sound from the sides but picks it up in front of and behind the mic. This is useful for capturing the sound of whatever is being miked, along with the ambience of the room behind the mic. It can cause problems with feedback in live situations, though, depending on where the monitor speakers are positioned on the stage.

Proximity Effect

Be mindful that any microphone with a directional polar pattern (this excludes omnidirectional mics) will produce proximity effect. This means the bass frequencies will increase as the sound source gets closer to the microphone. Proximity effect can be used to a singer's or speaker's advantage, adding fullness to the voice. However, good mic technique must be used to avoid overloading the mic. If a student moves closer to or farther away from the mic, the proximity effect will vary and so will the sound. A good rule of thumb is to tell students to hold the mic an inch or two away.

SAMSON 7Kit**7-piece Drum Microphone Pack with Clips, Stand Mounts, and Case**

Correct placement of mics on drums requires more than just skill; you need mics that are made to work with drums. That's why Samson's **7Kit** mic set is such a fantastic value for your program. This pack comes with all the microphones your students will need to get great sound from a drum kit. A Q Kick mic handles bass drums with ease, faithfully translating the fullness and punch to your mixer or recording device. Tired of dealing with a forest of mic stands around the drum set? The 7Kit's trio of Q Tom mics comes complete with rim clips, so you can attach them directly to the drums. You decrease clutter while allowing for perfect directional placement on each of the toms. The clip-on Q Snare mic provides excellent sound quality, and it's tough enough to hold up over the long haul. You also get a pair of C02 condenser mics, which work perfectly as overheads and provide the crisp detail you need.

USB Microphones

The ultimate in no-fuss recording, a USB microphone lets you record straight into your computer; there's no need to mess with any other gear! Each USB mic is a microphone at one end and a USB cable at the other. Plug the mic into any available USB port, just as you would a keyboard or a mouse, and you're ready to record! This gives students an easy and self-contained way to record into a computer, whether they're recording instruments, vocals, or a combination of the two.

WIRELESS RECHARGEABLE BATTERY SOLUTIONS

The use of wireless microphone systems has expanded at an astounding rate, and it is not uncommon for many performances to employ upwards of 10 or 12 wireless microphones. This can add up to a significant amount of budget spent on batteries alone. Using battery technology not only provides thousands of dollars in savings but more accurate power monitoring and less waste.

Many Shure wireless systems feature a sophisticated, reliable rechargeable battery option based on medical-grade lithium-ion technology. These batteries do not suffer from the “memory effect” that can plague other types of rechargeable batteries, and high current capacity allows for rapid charging and longer continuous runtime than standard alkaline batteries. For example, one Shure SB902 rechargeable battery will provide up to 16 hours of continuous run time with a GLX-D transmitter, while a pair of AA Alkaline batteries provides just 8.

The SB900 can be used in a variety of Shure wireless transmitters and receivers (see chart). Most have external charging contacts that allow docked charging of the batteries while in the device they power. The SBC200 docking charger has two charging ports for either devices or batteries, and up to four SBC200 units can be connected together and powered from a single power supply. Alternatively, the SBC800 charging tray can charge up to eight batteries at once in one low-profile unit.

The GLX-D® Digital Wireless system relies solely on the SB902 rechargeable battery, which provides 16 hours of use on a 3 hour charge. Batteries can be charged in the convenient charge slot built into the GLXD4 receiver, or in the transmitter with a wall charger or car charger.

Both batteries offer smart technology that keeps accurate metering of battery statistics, including remaining runtime, cycle count, and battery health. Remaining battery life is displayed in hours and minutes instead of the standard “bars” that only give an approximation of remaining runtime.

THE SMARTEST DIGITAL WIRELESS SYSTEM IN ITS CLASS

evolution wireless **D1**

REVOLUTIONARY

Wireless microphone systems can provide great flexibility and freedom, but they can also be a challenge to set up and operate. Getting great results can require technical expertise, and numerous adjustments to find a good frequency, eliminate noise, and optimize sound quality. Sennheiser's new evolution wireless D1 takes care of all this for you, allowing you to get right to work with confidence.

ADAPTIVE

Straight out of the box, Sennheiser's D1 systems automatically adapt to your environment. First and foremost, D1 continuously scans its environment and selects a good frequency for operation. If ew D1 ever detects possible interference (and it checks over 100 times per second) it seamlessly moves to a better frequency. This new feature, called **Wireless Link Protection**, ensures a reliable, solid connection.

RELIABLE

One of the challenges with traditional wireless is getting multiple systems to operate together without conflicts. D1 systems handle this for you, by automatically detecting each other's presence, and working together to select frequencies that work well together, with no overlaps or interference.

POWERFUL

D1's **Wireless Link Protection** also maximizes transmission range and battery life. RF output power drives how far your signal will travel. Greater distances require greater power. When working at longer distances, D1 will automatically raise the RF power to send your signal further. Most systems stop at 10 mW, but D1 will boost the power up to 100 mW (10 times the power!) to work at longer distances. Equally important, when D1 is operating at short distances, it will turn down the RF power to maximize your batteries.

DIGITAL

Keeping your wireless signal strong and stable is mandatory. But it also needs to sound great. D1 delivers crystal clear sound, by digitally capturing your signal right at the source, and encoding it for transmission with the highly regarded aptX Live codec. From a whisper to a scream, D1 stays with you and delivers clear audio.

With evolution wireless D1, Sennheiser poured a legacy of wireless know-how inside, and puts it to work for your application. **From small classroom to large auditorium, D1 delivers.**

DIGITAL MIXER SHOPPING GUIDE

Choosing a Digital Mixer

How do you find the right one? Let's demystify the process...

Digital mixers can seem like complicated beasts. How do you go about choosing one (or several) for your school? Fear not! Once you know a little about what to look for, they're not so intimidating.

If you're outfitting a lab, you first want to consider your space constraints. Digital mixer channels tend to operate in switchable banks, for example, enabling eight physical channels to control 32 tracks — so you get space savings there. Long-throw (100mm) faders are an

advantage if you can spare the real estate.

Connectivity and accessibility are important issues to keep in mind, especially if your mixers will be used in multiple areas of your campus (in a lab and for live performances in an auditorium, for instance). Many digital mixers offer advanced features such as Ethernet audio integration (Dante), multitrack FireWire computer connection, Wi-Fi networking, and even wireless tablet control.

TO LEARN MORE,
GO TO PAGE 65.

Digital mixers offer a number of conveniences that analog boards don't. As DSP chips are much smaller and far less expensive than their analog counterparts, you'll find digital boards packed with advanced EQs, dynamics processing, and effects, which can seriously cut down on outboard gear. The sonic quality of these processing tools (and of the mic preamps and converters, as well) should be a consideration. The ability to store and recall entire setups (scenes) is also a major advantage.

Typically sporting a single master control section for configuring all the channels, digital mixers can be confusing initially, and some will present a steeper learning curve to your students than others. To mitigate this, look for mixers with large screens and intuitive layouts.

As with any mixer, build quality should be a factor in your decision. You want to make a wise investment in equipment that will last.

Sweetwater carries a range of top-performing digital mixers to fit your needs and budget. Your Sales Engineer can help you select the perfect one.

TF Series

Digital Mixers with Touchscreen Technology, TouchFlow Operation, and Onboard Effects

Yamaha's TF series digital consoles offer fluid TouchFlow Operation, so you and your students can mix more efficiently and intuitively than ever before. Perfect for students learning the art of live mixing, the 40-channel **TF1** makes it remarkably easy to achieve a great mix — and its compact format won't take up too much space. This fully featured mixer includes great-sounding D-PRE mic preamps, a straightforward touchscreen design, easy signal routing, practical presets and scenes, and much more. Gain, compressor, and EQ setup is easy; with a simple twist of a knob, you can use a compressor to bring a guitar to life, add punch to bass, tighten up a snare, and make vocals ride clearly on the mix.

Need more channels? We also offer the 48-channel **TF3** and **TF5** mixers. Call us today and find out more.

M7CL-32

32-channel Digital Mixer with Centralogic Control Surface, Virtual Circuit Technology, and Wireless Remote Control

Yamaha's **M7CL-32** will make you rethink the notion that digital mixers are difficult to use. Thanks to its revolutionary Centralogic control surface, the M7CL-32 is as easy and intuitive to use as an analog mixing console. Plus, the M7CL-32's impressive array of functions eliminates the need for racks of external gear, making it the perfect all-in-one mixing solution for medium-sized live sound applications. With a few effortless touches on the M7CL-32's screen, you have quick access to great-sounding effects and EQs. Yamaha's Virtual Circuitry Modeling technology effectively models various pieces of analog gear, right down to their individual components.

In addition to remarkably easy-to-use Centralogic faders, you also get 12 user-defined keys that can be assigned to perform a range of useful functions.

Want to assign tap tempo to your delays, jump to a specific display screen, or activate talkback?

Just assign the function and press a button — it's really that simple! On top of that, channel names and icons

appear at the top and bottom of every channel. This powerful mixer puts you and your students in total command. Call Sweetwater today and find out more.

QL5

64-channel Digital Mixer with Onboard Processing, Auto-mix Functionality, Color Touchscreen, and Wireless Control Options

Put a premium digital mixing solution to work for your program! Yamaha took many of the outstanding core features of their acclaimed CL Series to create the **QL5** 64-channel digital mixer, for an easy-to-use, all-in-one solution for mixing, processing, and routing audio. The stellar sound quality is thanks to premium internal processors, including the Portico 5033 EQ and 5043 compressor developed with Rupert Neve, which give you powerful EQ and dynamics tools to shape any mix and bring out the best sonic character in any source.

In addition to mixing music, the QL5 is perfect for speech applications during school events and presentations. Use the built-in auto-mixing functionality to maintain the ideal channel balance, while you focus on optimizing your overall sound. You can also use an iPad or laptop for remote control and offline setup. In fact, there are so many powerful and convenient features on this mixer, from Dante network protocol support to multitrack recording capabilities and beyond, that we've only just scratched the surface. Call Sweetwater today to learn more about this

powerful mixer!

QL1

32-channel Digital Mixer with Virtual Circuit Technology and Auto-mix Functionality

Though it's compact, desktop-friendly, and very intuitive to operate, the **QL1** is a powerhouse digital mixer that's just as at home in a pro's live rig as it is in your auditorium. Packed with the same features that make the QL5 (left) such a breakout performer, the 32-channel QL1 gives you the added benefit of a smaller footprint. If your school's space considerations don't allow for a larger console, but you need a no-compromise mixing solution, then the QL1 provides the perfect combination of power and size. Like its big sibling, the QL1 gives you outstanding onboard processing options, a large touchscreen, auto-mixing functionality, wireless control/remote setup via iPad or laptop, and more.

M32

40-channel Digital Mixer with Onboard Effects, Tablet Control, and Expandability Options

If your facility's live performances and events demand uncompromising sound and reliability, then don't settle for less than a premium console: the MIDAS **M32**. From its elegant and robust industrial design to its outstanding audio performance, every aspect of the M32 console represents the cutting edge of MIDAS technology — while maintaining the immediate feel and intuitive layout of an analog console. Whether you're running the show from front of house, mixing monitors, or using the system for special events, you and your students will always feel in control with the MIDAS M32.

This incredible mixer gives you everything you need, including the capability to recall dozens of scenes — perfect for events with multiple ensembles or performances. You also get outstandingly smooth and dependable motorized faders, a generous display, a premium collection of onboard processors and effects, and even outboard control via your computer tablet or phone. This unbeatable system can also be easily expanded to fit your program's growing needs.

Virtual FX rack with more than 50 world-class effects processors built in

- Accurate emulations of classic studio processors
- Legendary processors including the Urei 1176 compressor and Pultec EQs
- Dynamics control and precision EQ for lush reverbs, choruses, and delays
- Virtual FX rack lets you assign up to eight true-stereo effects to any input, group, or output mix bus
- Eliminate the need for heavy and expensive racks of outboard processors

The M32's large, easy-to-read TFT display lets you navigate and monitor a huge range of settings — plus, you and your students can see the information you need clearly, in any environment.

X32

Behringer 32-channel Digital Mixer with USB/FireWire Interface

Behringer's **X32** digital mixer features everything you and your students need to easily mix — and even record — a live event. Plus, it's all packed into an impressively compact, roadworthy chassis. The X32 even supports Behringer's P-16 Personal Monitoring System (sold separately) for comprehensive monitoring control. But with its amazing-sounding MIDAS-designed mic preamps, this mixer is also at home in your recording lab. An incredible 40 inputs and 16 mix buses give your students the flexibility they need, while a 32 x 32 USB/FireWire interface delivers instant compatibility with major DAWs.

The X32 also provides powerful onboard signal processing, so you and your students can apply EQ, dynamics, effects, and more — and make those tracks and mixes shine. Thanks to wireless remote control options, you can actually step out from behind the board and tweak several functions straight from your iOS device. We offer several format variations on this powerful, flexible, and easy-to-use digital mixing solution. Call us today, and we'll help you find the one that best fits your program.

POINT AND SHOOT MIXING

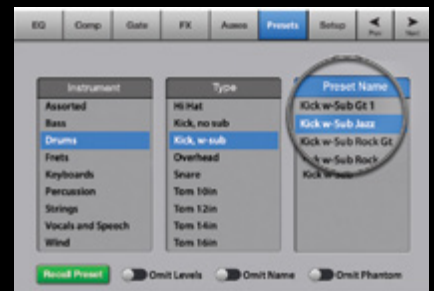

How can a mixer be as easy to use as a digital camera?

Imagine Point and Shoot Mixing

In the hands of an experienced photographer, a modern DSLR digital camera can create stunning images in any number of shooting conditions. The camera has a variety of presets created by professional photographers so that anyone can get a quality image in just about any condition. Just point and shoot. The camera knows what it needs to do to give you a great shot. It's the same with TouchMix. It's one of the most advanced digital mixers ever made, with features that rival consoles costing thousands more. But, its real genius is how the Presets, Wizards and Simple Modes put all that power to work easily and seamlessly to deliver you an amazing mix that will have everyone convinced that you are a professional sound engineer. Just like in the case of the DSLR, our team of professional sound engineers put everything they learned over decades of mixing live sound into TouchMix so that whether you're a pro or not, you'll get great results quickly, the first time, and every time. No other mixer can make this claim and that's why we say that TouchMix is Simply Genius.

TouchMix as a Learning Tool

The TouchMix is the perfect mixer for teaching live sound and mixing. Its easy-to-understand workflow and on-board screen graphics clearly visualize mixing functions such as EQ, Compression, Gate, DCA, Mute Groups, Reverb, etc. Results are made easy with Presets, Wizards and Simple Modes, while behind every pre-calculated function is the opportunity to look "behind the scenes" to see just what our engineers did to get that perfect sound or elegantly route signal and effects. The student/user learns mixing, essentially by looking "over the shoulder" of professionals with decades of experience. Taking the wheel, the user's learning curve is further minimized with an onboard manual just a context-appropriate help file button push away. TouchMix also records and plays back multi-channel digital audio when connected to a USB hard drive — great for rehearsals, announcements or capturing live performances and events.

Over 100 instrument, mic and source channel Presets, FX Presets, and mixer scene Presets created in live sound environments by professional sound engineers to deliver the right settings at the touch of a button.

PreSonus StudioLive RM16AI

16-channel Digital Mixer with Recording Interface, Wi-Fi, and Remote Touch Control Software

The PreSonus **StudioLive RM16AI** digital mixer packs everything you need for mixing and recording, live or in the music lab, in a compact 3-rackspace package. This innovative mixing solution gives you 16 fully recallable XMAX Class A preamps for your inputs, 32 internal channels, 25 buses, three main outputs, and a 52 x 34 FireWire audio interface operating at up to 96kHz, to give you all the great-sounding I/O you'll need to run your live events effectively.

But here's what really sets the StudioLive RM16AI apart: all your mixing on the StudioLive RM16AI is done wirelessly on your iOS device, Mac, or PC, via UC Surface touch control software. In addition to being able to mix from the palm of your hand, you can give up to 10 performers control of their monitor mixes using free PreSonus QMix-AI software for iPhone/iPod touch. This means each performer can tweak his or her own monitor mix, right onstage! Need more channel options? The 32-channel **StudioLive RM32AI** is also available. PreSonus StudioLive CS18AI

18-fader Control Surface Integration with RM AI Mixer Integration

If you want serious flexibility for your program, then build your live sound or music lab recording rig around the PreSonus **StudioLive CS18AI** AVB Ethernet control surface. When you couple the CS18AI's 18 motorized faders and extensive onboard controls with StudioLive gear, you can get upwards of 64 channels of mixing and recording I/O, plus total control of PreSonus Studio One. AVB Ethernet delivers both instantly responsive control and bidirectional audio, allowing you to monitor through your CS18AI and provide talkback, room mics, or control room recording capabilities. This control surface gives you and your students the kind of well-placed controls that help take the frustration out of mixing.

With the StudioLive CS18AI, you're free to grow and change your setup as needed. If 32 channels aren't enough, then you can cascade two StudioLive RM mixers together for expanded I/O, and thanks to the CS18AI's scribble-strip display and DCA groups, managing a higher channel count is totally painless. What's more, you still get the StudioLive AI iOS integration, so you can always add iPhones or iPads for personal monitor mixing and remote access. Call us today and get all the details!

MACKIE. VLZ4 Series

Analog Mixers with Onyx Preamps

When your students are learning how to work with a mixer, you need to provide them with a tool that's easy to use, professional grade, and built tough to withstand years of constant use. Mackie's VLZ4 series mixers absolutely fit the bill, and they're priced right for your program's budget. Thanks to a clear, clean layout, students will have no trouble navigating channels and other controls. Connection points are also easy to work with, whether you're using desktop or rackmountable configurations. VLZ4 series mixers feature Mackie's stellar Onyx mic preamps for incredibly wide dynamic range, low-noise performance, and plenty of gain. In fact, the Onyx's 60dB gain range means you can use a variety of microphones with these mixers — without the need for external preamps. We offer VLZ4 series mixers in several different configurations. The **1604VLZ4** gives you 16 channels and 16 preamps, while the **1642VLZ4** sports 16 channels and 10 preamps — and positions connections for easy rackmount use. The two largest-format consoles, the 24-channel **2404VLZ4** and the 32-channel **3204VLZ4**, also feature onboard DSP effects and built-in USB audio interfaces that allow for direct connection with your music lab's recording software.

Signature Series

Analog Mixers with Built-in Effects and USB

Your music program doesn't have to sacrifice performance or features to find a quality mixer that fits the budget. **Signature Series** mixers get the job done — and they're incredibly affordable! Utilizing the same circuit design as some of the best consoles in their history, Soundcraft has packed these mixers with their iconic Ghost mic preamps. The result? Your students work with extraordinary headroom, wide dynamic range, and remarkable clarity. You also get onboard British EQ, as well as built-in studio-grade effects from Lexicon and stellar-sounding limiters from dbx.

These analog mixers provide you with two channels of USB connectivity, so students can create pristine recordings of live events — straight from the board. Loaded with premium-quality faders and flexible routing options, Signature Series mixers offer professional-quality platforms with all the features students need to learn to mix and run live sound. Choose among 10-, 12-, 16-, and 22-channel versions. Call Sweetwater today and find the Signature Series mixer that's perfect for your school.

Integrated Sound Tools for Music Education

PreSonus provides a single, simple audio solution

By Micah Blouin

As audio electronics have become affordable and easier to use, music educators increasingly want to add them to their teaching toolkits. But aside from microphones and powered speakers, what else do you need to create a practical sound system for education? Which mixer do you need to help your jazz band sound its best? Which recording interface should you use for high-quality assessment tests?

Fortunately, all you need to do all this and more is a PreSonus® StudioLive® AR USB-series mixer. The series includes three models: the 18-channel StudioLive AR16 USB, 14-channel StudioLive AR12 USB, and 8-channel StudioLive AR8 USB.

StudioLive AR16 USB

Recording Rehearsals and Performances

The most efficient way to provide high-quality feedback in rehearsal is to use the recording features built into StudioLive AR USB-series mixers. StudioLive AR USB mixers are equipped with a USB 2.0 audio interface that can capture all input channels, plus the main mix, to a Mac or Windows PC. This lets you capture rehearsals and play them back instantly for critique. The interface can record at up to 24-bit, 96 kHz, which is better than CD quality.

The audio interface is great for capturing live performances, as well. Marching band, choir, orchestra, concert band—any ensemble can be multitrack-recorded to a computer over USB using the included PreSonus Capture™ recording software for Mac and Windows. Later, you can mix in Studio One®.

Quick and Easy Stereo Recording—No Computer Required

For applications where connecting a computer is inconvenient, every StudioLive AR USB mixer includes an onboard stereo SD recorder that lets you record the main mix without a computer—just hit Record and go. Later, you can transfer the stereo recording to a computer with an SD-card reader and publish it online. You can also use the SD recorder to play up to 32 GB of MP3 and WAV files for hours of playback without needing a computer.

Onboard stereo SD recorder

Take Advantage of High-Tech Devices

StudioLive AR USB mixers feature the PreSonus Super Channel, which allows you to connect four stereo analog and digital sources at once, enabling you to plug in a media player or play stereo audio from the onboard SD recorder or from your USB-connected computer. Use onboard Bluetooth® 4.1 to pair your smartphone to the StudioLive AR USB mixer and instantly have wireless access to your audio files for assessments, musical examples, and ear training.

PreSonus Super Channel

Plug Guitars and Bases Directly into the Mixer

Most mixers make you route acoustic and electric guitars and basses through external direct boxes before connecting to a mixer input, requiring additional boxes and cables. But with

StudioLive AR mixers, Channels 1 and 2 have high-impedance instrument inputs, so you can plug a guitar and an electric bass straight into the mixer—no direct box needed.

Sweeten with Digital Effects for a Polished Sound

To get a great mix, you need high-quality effects. The StudioLive AR16 USB has you covered with an internal stereo effects processor with 16 presets. A dedicated effects return lets you adjust the amount of the effects in your main and monitor mixes. It's just another way that StudioLive AR USB mixers enable you to build high-quality mixes and recordings quickly and easily.

A Single Solution

Compact and built to take the wear and tear of an educational environment, the StudioLive AR16 USB is an easy-to-use, all-in-one solution for audio mixing and recording. With a wide variety of connections, two ways to record, and a simple, elegant mixing surface, it will save time and money and make you a more efficient and effective teacher.

Make the Call

Your Sweetwater Sales Engineer understands your needs and how to fit your school's budget. Whether the music department is small or large, your Sales Engineer is ready to help you design your own PreSonus audio solution.

StudioLive AR Series

Digital/Analog Hybrid Mixers with Digital Effects, Bluetooth 4.1, and Recording Software

Much more than a powerful live mixer! A great performance is one you'll want to preserve. That's why **StudioLive AR Series** digital/analog USB mixers make it easy to capture multitrack audio in stunning 24-bit/96kHz as students mix. They can send all channels to dedicated tracks in the included Studio One DAW software for later mixdown. Or, students can grab a stereo mix of the show via the onboard SDHC card recorder and stream audio incredibly quickly and efficiently.

Class A preamps and all-analog channel EQs capture clean vocals, guitars, and drums. StudioLive AR Series mixers also feature flawless digital stereo reverbs, delays, and chorus, so it's easy to add space and texture to instruments. You can even stream program music or other material wirelessly over easy-pairing Bluetooth 4.1 — a very useful resource for your school's live events.

We offer AR Series mixers in 8-, 14-, and 18-channel configurations. Call us today; we'll help you find the model that works best for your program's requirements.

MG Series

Analog Mixers with Flexible Routing Options and D-PRE Microphone Preamps

Each of these remarkably affordable **MG Series** mixers comes equipped with Yamaha's Class A D-PRE mic preamps, which give you a studio-quality front end for your signal path. They also provide low-noise performance and a wide frequency range, so you get the best performance possible from your microphones. Using an MG Series mixer is an incredibly intuitive experience, thanks to the smart, clean control layout. And, when you want to shape your sound, you'll appreciate the 3-band channel EQs and highpass filters. Plus, MG mixers with 10 channels or more also feature 1-knob compressors — an incredibly convenient way to take dynamic control over several input sources at once. Need flexible routing options? The MG Series has you covered, with up to four aux sends. You get Master Send controls plus Return level knobs for the stereo and aux buses. The MG Series line also includes XU models, which give you added digital connectivity via onboard USB 2.0 interfaces. Plug your MG XU mixer directly into your lab's computer, fire up the included Steinberg Cubase AI production software, and take projects to new heights.

BOSE

F1 Model 812

1,000-watt Adjustable-array Powered Loudspeaker

Effective live sound requires being able to reach every seat in the auditorium (or the gym, or the cafeteria). But how do you pick a system that works ideally in several environments? The Bose **F1 Model 812** flexible-array loudspeaker takes the worry out of live sound for your program. Its 1,000-watt onboard power plant provides the clean, clear sound you need — and an adjustable-array design actually allows you to physically shape the layout of the eight mid-/high-frequency speakers to either a C, J, reverse J, or straight pattern. In addition, a 12" speaker adds the lows and low mids you need for big, full sound. The result? You'll be able to deliver perfect sound coverage to the audience you're trying to reach. Though the F1 Model 812 provides a huge sound coverage pattern and plenty of onboard power, this revolutionary system is actually a single compact package that can easily be broken down and carried with one hand. This means you and your students can put the F1 Model 812 to work wherever sound reinforcement is needed.

Add incredibly effective low-end sound to your F1 system, with the stellar **F1 Subwoofer**. This powered 2 x 10" sub pumps out an impressive 1,000 watts, and it integrates perfectly with your F1 Model 812 loudspeaker. The F1 Subwoofer is surprisingly lightweight and portable; like the F1 Model 812, you and your students can break it down and transport it with ease. Call us today and find out more!

Vertically oriented 8-driver mid/high line array, with each driver mounted on a custom 100-degree waveguide, helps deliver wide, consistent coverage

F1 Subwoofer

2 x 10" LF drivers provide high performance at low frequencies for strong output

Shown as a stack

Straight pattern

Use the straight pattern when the audience is standing and their heads are at approximately the same height as the loudspeaker.

Reverse J pattern

The reverse J pattern is effective for an audience in raked seating that starts at loudspeaker height and extends above the top of the loudspeaker.

J pattern

The J pattern works well when the loudspeaker is up on a raised stage and the audience is seated below on the floor.

C pattern

Use the C pattern for raked auditorium seating in which the first row is on the floor with the loudspeaker.

BOSE
Better sound through research®

Full, clear sound. Incredible portability. Outstanding ease of use. Three reasons why Bose L1 systems make perfect all-in-one PA solutions for your program. Whether you're staging live events, using a PA in the classroom, or enhancing your lab projects, you can count on L1 systems to give you the sound quality you want — and the multi-application convenience you need.

With vertical speaker arrays and compact integrated mixers, L1 systems are both impressively portable and visually unobtrusive. More importantly, though, they eliminate a common live sound issue: getting clear sound to the performers as well as to every listener. To achieve this, Bose developed a wedge-shaped radiation pattern, with near-zero ceiling and floor reflections. Each L1 disperses an even wall of nearly 180-degree sound. The result is onstage monitoring that's virtually identical to what the audience hears, with no muddiness. Plus, the modular design makes your L1 system perfectly adaptable to different rooms in your school. Call us today and find out more about these innovative, easy-to-use L1 systems.

L1[®] COMPACT SYSTEM

UP TO
100
LISTENERS

SPATIAL DISPERSION™ LOUDSPEAKER TECHNOLOGY

L1 systems use an efficient and effective vertical speaker array that delivers room-filling sound — without the need for stage-cluttering gear. Lightweight components and an integrated column design allow for a standalone system that's easy to set up and takes up a minimum of space. L1 systems make great sound solutions for any program!

L1 Compact

Great-sounding, Easy-to-use Portable PA System

Bose products are renowned for their premium-quality sound and innovative designs. Now you can put Bose quality to work in your music program, with the versatile **L1 Compact** portable PA system. The L1 Compact is small enough for use in the classroom, lab, or rehearsal room — but it also provides enough big sound for live events in your school or for special events outside. This system features an integrated 2-channel mixer, so you can plug in two audio sources at once. It even includes ToneMatch presets, which optimize each channel for speech or instrument applications. Two different setup configurations make the L1 Compact perfect for a range of applications.

Samson Expedition Series Portable PA Systems

Managing and running sound within an education setting can be challenging. With most sound system components permanently installed in your school, you may find yourself in need of the flexibility that's offered by a portable PA system. Most integrated sound systems don't take into account the specific audio needs of individual educators. Don't be limited by the constraints of the classroom. Expedition Series speaker systems are highly portable, easy to use audio solutions voiced for both presentation and live music applications. **Simply connect an audio source and turn up the volume.**

Go Wireless

Along with the specific classroom needs, there are activities happening all around your school—cafeterias, theaters and even outdoors. At any location, you may require the flexibility of portable sound reinforcement without the hassle of additional cables and wires. Samson's Expedition XP106w, Express and Escape provide lightweight, rechargeable wireless speaker solutions. These uncomplicated systems feature inputs for both microphones and music, ensuring that your audio is loud and clear. Their innovative designs include integrated carry handles, speaker pole-mounts and wireless streaming audio via *Bluetooth*®. Don't let their size fool you, these battery powered speakers provide loud, clear sound in compact packages.

Raise Awareness

Often overlooked by administrators, quality sound is extremely important to a learning environment that allows students to be more aware and focused. Samson's Expedition XP1000, XP800 and XP150 supply the power and features required to deliver great sounding presentations and musical performances. All three stereo systems feature an innovative slide-and-lock design that allows all system components to be quickly packed up in a single lightweight package. With multiple microphone and line inputs, wireless streaming audio and digital effects for adding depth to the audio, these systems are perfect for a variety of indoor and outdoor settings.

Call your Sweetwater Education Specialist at (800) 822-6752 or visit SweetwaterEdu.com to learn more about Samson's Expedition Portable PA.

3 Questions To Ask Before Choosing A Portable Sound System:

1. How portable does your sound system need to be?

- Do you need the easiest setup and portability without the hassle of AC extension cords? *XP106w, Express, Escape*
- Is the system going to be used mainly in one area, but requires more power and input flexibility? *XP1000, XP800, XP150*

2. How much power do you need for your sound system?

- A small single speaker system between 30–100 watts of power may be adequate for a small room. *XP106w, Express, Escape*
- Larger rooms seating 75–100 people may require a sound system with 150+ watts of power. *XP1000, XP800, XP150*

3. What is your primary application?

- If using your system for an outdoor presentation or with live musicians you'll need a system that has multiple inputs and sufficient power to capably reproduce the audio. *XP1000, XP800, XP150*
- Rechargeable systems are highly recommended for mobile sound reinforcement applications. *XP106w, Express, Escape*

YAMAHA DXR Series Portable Powered PA Speakers

Be heard loud and clear, with Yamaha's DXR series of loudspeakers. The **DXR15** packs plenty of power onboard (700 watts). But its surprisingly lightweight design makes this loudspeaker easy to transport between labs, event locations, classrooms, and performance venues. You get all the inputs and controls you need to plug in and tailor the DXR15 to your system — and if you need a super-compact setup for a special event, then you can even plug a microphone directly into the speaker's back panel. DXR series speakers are available in several different speaker configurations. Call Sweetwater today to find out which one is right for your program.

Power Amps Why do I need a power amp?

Though some small PA systems use speakers or mixers with built-in power, larger systems rely on separate power amplifiers. You'll want to consider what size you need as well as which connectors work with your equipment. Call us today, and we'll help you find the amp that works best for your needs.

CROWN

Speaker Management What is speaker management?

Speaker management systems help you get the absolute best performance out of your PA system, in any setting. Many include EQ and speaker-level presets, so you can set up quickly in different rooms. These systems also keep pesky feedback at bay.

dbx **DriveRack PA2**
PA Speaker Management System with EQ, Compression, Alignment Delay, Feedback Elimination, and Remote Tablet Control

The **DriveRack PA2** loudspeaker management system takes the guesswork out of setting up your PA system for live events. Presets for the most popular speakers and power amps are included to accelerate the setup process, and your favorite settings can be saved for use next time. An AutoEQ function automatically dials in the best EQ settings for a given room. And feedback detection constantly searches for feedback and eliminates it before it hits your speakers. You can even wirelessly control several of the DriveRack PA2's functions with your favorite tablet device! Enhance your

SONY **Vegas Pro 13**
Powerful Video Editing for Windows

Vegas Pro 13 is the latest iteration of Sony's flagship video editing software, and it comes packed with a host of new features designed to inspire your students and ignite their creativity. Whether you need software that will allow your students to create cinematic projects or produce simple videos for social media, you're going to appreciate both the power and ease of use Vegas Pro 13 has to offer. A streamlined user interface, drag-and-drop simplicity, and a library of straightforward effects and transitions make Vegas Pro 13 ideal for everyday video production.

For starters, Vegas features professional-standard color correction, transitions, and other useful processing such as advanced image stabilization, allowing anyone to create great looking video, even when filming with an inexpensive consumer camera. In addition to its standard set of over 390 video effects and over 200 video transitions, Vegas Pro 13 comes with the Video Essentials VI plug-in bundle from NewBlueFX and iZotope's Nectar Elements vocal processing suite. At the same time, Vegas Pro 13 includes advanced processing for DVD/Blu-ray disc authoring and Dolby Digital encoding, as well as multiuser workflows, all of which are essential if you're exploring broadcast television or film production techniques. For additional video stations that don't need the added effects and disc authoring, check out **Vegas Pro 13 Edit**.

- Supports GPU devices from AMD and NVIDIA
- Project Interchange allows for easy session exchange across platforms
- Event synchronization
- Supports DirectX and VST audio effects

Mega Bar 50 RGB

DMX-controllable Tri-color LED Bar Light

The **Mega Bar 50 RGB** LED bar light is only 1.5' long, but it provides a massive curtain of light. The effect is like that of a 30-degree spotlight — only the Mega Bar 50 RGB's projection is shallow, so you won't get any splash on walls just a few feet behind the light. This means you can create incredible depth-of-field effects and breathtaking silhouettes — especially when partnered with a fog machine. With its array of 126 red, green, and blue 10mm LEDs, the Mega Bar 50 RGB can create 32 different colors, transitioning via built-in programs, DMX 512, or by responding to sound.

MegaBar50RGB	Mega Bar 50 RGB.....List \$209 ⁹⁹	ONLY \$10/mo. \$159⁹⁹
---------------------	----------------------------------------------	--------------------------------------------

Dotz TPar System
4-in-1 Par-style LED Lighting Fixture with Stand, Remote, and Bag

ADJ's **Dotz TPar System** essentially combines four LED PAR instruments in one, providing you with incredible performance at a great value. While you can control it via DMX, the Dotz TPar System's automatic/sound-activated patterns provide extremely easy setup, and you can daisy-chain it with other units. This system comes with a stand, remote, and the accessories you need.

IN THE CLASSROOM

COMPUTER AUDIO & MUSIC SHOPPING GUIDE

A Digital Studio in the Classroom

Digital technology has forever changed the way we record music. You no longer need pro-level recording studios and high-end equipment to produce serious recording projects. Affordable digital equipment and software have made it so that you can build a studio that fits your budget.

So, how do you set up a modern classroom to be a digital studio that fits the needs of both students and teachers? We'll show you how a recording facility and a classroom can easily and happily coexist — and not get in each other's way. And it won't cost an arm and a leg, either. In fact, a studio in the educational environment can accelerate the learning process and get your students excited about creating music.

Do I Need a Studio?

The need for a studio is largely based on what you seek to accomplish with your music lab. If simply documenting the musical creations of your students is your primary goal, then a full-blown studio probably isn't necessary. But if students have aspirations of putting their songs on a CD,

a studio setup can be a cost-effective alternative to booking time in an expensive professional studio.

Could your music lab benefit from additional musicians or instrumentation, but the class is tapped out of viable musically inclined candidates? Well, another benefit of a classroom studio is that you can use MIDI to trigger sampled sounds from a virtual instrument. These sampled sounds can be used as backing tracks to bolster the students' performance. You can also record traditional acoustic instruments alongside their virtual counterparts, to further enhance your palette of sonic coloration.

Many school musical events can be adequately captured by a pair of mics. But what if you could immensely improve the sound quality by producing a true multitrack recording? A school that is equipped with a studio setup can capture these events with a quality that will not only impress parents but also preserve these special performances for years to come.

Where Will I Put a Studio?

Let's start by defining what we mean when we use the word "studio." By classic definition, a studio would be a room — or a collection of rooms — that is treated for optimal acoustic sound and equipped with a recording device, a mixing console (or a digital representation of one), and processing equipment. Microphones would likely be involved, as well as a collection of instruments.

A modern recording studio differs from the classic interpretation in that both the hardware processors and the instruments that once occupied much of the space have now been replaced by software representations. This is great news for a school that is looking to have a studio but lacks the space for a ton of hardware. But even in the digital world, acoustic instruments (guitars, basses, and the like) are still

the norm, with virtual instruments often filling the role of pianos, organs, and even drums. These virtual renderings of instruments and processors save both money and space.

Computer monitor
not included

So, does your studio need to span two or more rooms, or will one room suffice? For musical creations that will be powered with a healthy dose of virtual instruments, with the occasional “real” instrument thrown in, a compact setup will do nicely. This style of studio does not need to occupy much more space than what a desk, a computer, a chair, and a keyboard would take up. The next step up would involve slightly more space — likely a good-sized room — with room to set up an amplifier or two and possibly a drum kit. You don’t need a huge room, but one big enough to allow the amplifiers to achieve a decent volume without “bleeding” into the mics in the room. Small amps can fare pretty well in smaller rooms, so if space is limited, consider picking up some small low-wattage amps.

Acoustic drums present a special challenge in studio situations. Because of the nature of their sound (not to mention the size of an average drum kit), if drums are going to be a large part of typical recordings, you’re likely going to need more space. Unlike close-miked instruments, drums require mics to be placed in a more ambient manner. Thus, a larger room is necessary to prevent the drum mics from picking up the amps in the room.

Should your studio span numerous rooms? If you have the space and the need to track multiple loud sources at the same time, then the answer is yes. There’s nothing counterproductive about having your studio space take up multiple rooms. Professional studios typically have a control room and a live room. This dual-room approach gives teachers the ability to monitor the incoming signals to make sure they’re happy with the sound. But there’s no rule that says you have to have multiple rooms. A good pair of headphones can turn virtually any room that’s equipped with a computer and an audio/MIDI interface into a perfectly acceptable studio space. And these smaller, more intimate spaces are often wonderfully conducive to creativity, especially in educational environments. If your school has an auditorium, then that may serve as a convenient place to set up a full band for recording, as it provides an acoustically superior environment to a classroom setting.

Whether you opt for a multiple-room setup or a streamlined single-room operation, keep one very important thing in mind: virtually no room in its natural state is what a recording engineer would call acoustically “great.” Professional studios and concert venues are tuned to be as close to acoustically perfect as possible. Acoustic treatment can take a boomy, echo-filled room that is unsuitable for recording and give it an acoustically neutral sound. Every studio space should be treated, if professional sound quality is hoped to be achieved.

What Do I Need?

Let’s start with a brief summary of why certain pieces of gear are essential for recording into a computer. The sound coming out of a guitar, a microphone, or a variety of other sources is typically analog. But for audio to be manipulated within a computer, it needs to be converted into a digital signal. An audio interface connects to your computer — typically via USB, FireWire, or Thunderbolt — and can provide both analog-to-

digital conversion (A/D) and preamplification for mics and instruments. If an interface has at least one mic preamp, an external preamp isn’t necessary.

If virtual instruments are going to be the focal point, then a basic audio interface with MIDI I/O and a single mic preamp will probably suit you best. When several instruments need to be recorded at one time, a 4-channel interface will do. If your studio needs are likely to expand, then look for an interface with digital inputs, which will allow for the connection of external equipment with either S/PDIF (usually 2-channel output) or ADAT (also called lightpipe, which provides up to eight channels of audio) connectors.

So far, we’ve only covered all-in-one types of interfaces. If you want to get really serious about your studio, then you could use external preamps to feed signal into an A/D converter, which you would then connect to your computer. Of course, you’ll need microphones, DAW software for editing and mixing audio, some sort of MIDI controller if you want to trigger sounds from virtual instruments, and plug-ins or external hardware to process your recorded sounds.

As with anything, the sky’s the limit. You can literally get started for next to nothing, with a bare-bones setup, or you can spend significant cash on a rig that would make most pros envious. Most of us find ourselves happy somewhere in the middle, and that’s why Sweetwater’s representatives are always ready to help you find the studio setup that fits your classroom situation and your budget.

Ready to Run, Out of the Box

To ensure compatibility, we thoroughly test our Creation Stations with all the latest software. What's more, we can ship your Creation Station with the software you need, already installed — it will be ready to go, right out of the box.

SweetCare® Remote Support

Using the same technology that NASA uses to program satellites, we can log into your Creation Station to provide the support you need. Access is completely under your control. If you choose to provide a temporary hole in your firewall, we can help you with any issue, directly and instantly.

Unparalleled Service and Tech Support

Because we build the Creation Station PCs here, we know them better than anyone. If you need help with your Creation Station, our tech support staff is here for you. We also offer plenty of helpful online Creation Station resources that you can access 24/7. Our service department is the best in the industry, and turnaround times are incredibly fast.

More Than Just a PC — It's a Music Computer

From its motherboard to the memory to the power supply and beyond, a Creation Station computer is built for music. Even the fastest and most powerful off-the-shelf PCs can struggle when it comes to running music applications. Our team designed the Creation Station line with music specifically in mind.

Amazing Warranty

Creation Stations come with Sweetwater's Total Confidence Coverage™, our exclusive FREE 2-year warranty. Also, Sweetwater supports all manufacturer warranties (some of which extend beyond two years).

- Skylake Core i5-6260, 1.9GHz
- Dual-core
- 8GB RAM
- 1 x 500GB SSD hard drive
- Windows 10 64-bit OS
- Mini desktop
- Support for up to 2 displays
- Only 4 lbs.

Going with Windows 10

Our Creation Station PCs ship with operating systems tested for and confirmed compatible with all major DAWs and interfaces.

Don't invest in a PC that's not built to handle your program's needs

Lots of off-the-shelf PCs look as if they would work well for your music program — on the surface. But take a closer look and you'll soon find that they're equipped with less-than-ideal components and loaded down with power-sapping extras that have nothing to do with your needs. Spreadsheets, games, and Web-surfing software might be fine for home or office computers, but they can put a real drag on even a powerful music lab PC running audio programs. You don't want to be stuck with a computer that can't keep up with your current program — let alone grow along with it. And you don't want to take money out of your budget for all those unrelated "extras" you'll never use. You need a powerful, fast computer that's specifically built to handle audio applications.

Our powerful Creation Station handles your audio needs — and more

Though our Creation Station PCs can handle all your day-to-day computer needs, these powerful CPUs are built to run your program's audio applications efficiently and reliably. In fact, we thoroughly test our Creation Stations with all the major software to ensure compatibility. We even offer turnkey installs, so you'll have your choice of software onboard and ready to run as soon as you receive your Creation Station. You're simply not going to get this level of performance or convenience from an off-the-shelf computer.

Built for your class or lab, built to last

You can easily run notation, ear-training, and theory software on a Creation Station, alongside even the most powerful audio production applications out there. Plus, our computers are built to perform over the long haul. They'll keep up with your software's upgrades and updates, so you won't be stuck with an overtaxed CPU after a year or two. Best of all, Creation Stations are

competitively priced, so you'll get far more value for your school's dollar than you would from a regular PC.

Who's supporting your computer?

Have you ever tried dealing with tech support issues for both your music program's computer and your software? Usually, that means dealing with two different support sources. That's not the case with us. If you have questions, you can talk with the people who actually build Creation Stations, not third-party sources. And we can address both CPU and software issues, so you don't have to make extra calls or wait to speak with someone who knows how to answer your questions.

What makes a Creation Station the right computer for your music program?

- Optimized for audio but also capable of meeting all your day-to-day computer needs
- Premium components that work perfectly with music applications
- Tested to work perfectly with audio software
- Built to keep working as your program grows
- Turnkey installs available for simple, quick setup, right out of the box
- Competitively priced
- Unparalleled tech support for your Creation Station — and your software

Your music program needs a computer that's made for music. Choose a purpose-built Creation Station.

Focusrite Clarett 2Pre

2-in/4-out Thunderbolt Audio Interface with Software

Focusrite's **Clarett 2Pre** Thunderbolt interface includes two pristine mic/instrument/line preamps for great sound right at the source. High-resolution 24-bit/192kHz digital conversion puts that sound quality into your lab's computer, and ultra-low round-trip latency means your students can use DAW plug-ins for monitoring. Focusrite included their "Air" effect, which models the sound of the company's acclaimed ISA transformer-based preamps. The Clarett 2Pre also includes MIDI in and out, and an ADAT optical input expands your input options. The 4-channel **Clarett 4Pre** adds S/PDIF in and out, while the 8-channel **Clarett 8Pre** also adds word clock output. All three units come complete with a pair of powerful plug-in suites.

MICROBOARDS[®] Technology **Print Factory Pro**
Full-color CD/DVD Printer with Software

If your program needs to print high volumes of professional-quality CDs or DVDs on a regular basis, then here's one of the most cost-effective ways to get the job done. The **Print Factory Pro** combines the best of Microboards quality and HP inkjet technology to give you an ultra-efficient disc printing solution. By using separate C, M, Y, and K ink cartridges, the Print Factory Pro wastes virtually no ink. One complete set of CMYK ink cartridges can easily produce up to 1,500 discs, bringing your cost per disc down to about 11–18 cents, including full-color and full-coverage printing.

The included software suite makes label design simple, allowing you to import straight from your favorite design software. Both the Print Factory Pro and the included software are compatible with Macs and PCs. When you're ready to print, just load up to 100 discs onto its spindle, start printing, and walk away — the Print Factory Pro requires no supervision whatsoever.

propellerhead

Reason 9

More Creative Power Than Ever for Your Students

Reason 9 from Propellerhead is the all-in-one music production tool that helps to streamline the journey your students take from creation to sharing with an interface that is as fast, sleek, and intuitive as ever. Your classes will learn how to quickly record audio on unlimited tracks, create beats, play virtual instruments from a powerful and expandable rack, and mix down on a superb SSL-modeled console. Reason 9 has been updated with three new Player devices, 1,000 sound patches from leading sound designers, and pitch editing for nailing perfect performances. You'll be able to supercharge your workflow with the Bounce in place feature. And three new themes (default, blue, and black) let you match the interface to your preferences and moods with the click of your mouse. Whether you're teaching music for media, radio billboards, or any other broadcast audio, WaveLab Pro 9 features advanced loudness metering that ensures your students' audio is in compliance with EBU regulations. Also, Steinberg's normalizer tools have been modified to meet the requirements of EBU standards. For an even easier visualization of amplitude, you can enter into a zoomable loudness view to visualize all values as a graph. All of this will help you teach students how to make their media ready for broadcast. Version 9 is everything the professionals love about Reason in its most powerful package to date.

Reason Essentials 9 is also available for beginning students who may not need the full complement of audio tools.

NEW!

Reason 9 Features:

- 3 new Player devices
- Redesigned, always-open browser
- Pitch edit for perfecting your tracks
- 1,000 new synths and instrument sounds
- Access to Propellerhead Collaborative Music Service
- And much, much more!

cakewalk

SONAR Platinum

Music Production Software for PC, with Virtual Instruments and Unlimited Tracks

Cakewalk's **SONAR Platinum** gives you the world-class instruments, effects, and audio tools to help your students realize their musical ideas — quickly and efficiently. The acclaimed Skylight user interface lets you effortlessly navigate your production workspace, seamlessly going from recording to editing to mixing, and back again. This DAW's 64-bit Double Precision audio engine delivers impeccable tracks and makes it easy to upload polished mixes directly to YouTube and SoundCloud. Better still, you can do it all without track and plug-in limitations. SONAR also supports such cutting-edge technologies as VST3, multi-touch, and Gobbler cloud save. With unlimited audio, MIDI, and instrument tracks at your disposal, SONAR Platinum sets the bar when it comes to basic recording capability. There's also no limit (other than your interface's I/O) to the number of inputs you can record with at once. But the basics are hardly all SONAR Platinum has to offer. Its phenomenal-sounding 64-bit/384kHz audio engine keeps your sound as pristine as possible for mixing and editing. It also provides you and your students with a huge collection of useful recording options, including the ability to record multiple takes directly to separate take lanes in the same channel or to monitor effects while recording. And SONAR Platinum gives you the power of VocalSync, an indispensable vocal alignment tool for video editing. Students will find all the instruments they need inside SONAR Platinum. You get 21 virtual instruments, including Rapture, Dimension Pro, and Z3TA+ Classic synths. Sixteen new drag-and-drop amps let students easily record guitars and basses direct.

SONAR Platinum also gives you the powerful ProChannel console strip that includes nine different modules — including QuadCurve EQ and REMatrix Solo, a zero-latency convolution reverb module. And since you can also mix for radio, video, podcast, or MP3 and bounce all of them at once, SONAR Platinum saves you serious time when it comes to tackling many advanced mixing tasks. The more streamlined **SONAR Professional** and the amazingly affordable **SONAR Artist** are also available.

Music labs and creative minds alike have an affordable all-in-one audio and MIDI production tool: Steinberg's **Cubase Pro 8.5** software. Streamlined recording, powerful editing tools, flexible mixing options, incredible virtual instruments, tons of amazing plug-ins — these are the reasons that many of today's top music producers and musicians choose Steinberg's Cubase DAW. Whether you're looking for a great way to record projects, an integrated environment for composing and arranging musical scores, or a powerful tool students can use to lay down beats and grooves, you're going

to love working in Cubase. And with new improvements and features (including an updated MixConsole, a Retrologue 2 synthesizer plug-in, an Elastique v3 time-stretch/pitch-shift tool, and more), students will have all the resources they need to accomplish more and make better music.

This impressive software gives you a set of versatile virtual instruments, dozens of powerful plug-in processors, and even multiple MIDI effects processors. You get a huge range of sounds, from electronic drums and synths to acoustic instruments and sound effects. And Steinberg's unique instruments are here too, including the sound-warping Padshop granular synth and the MPC-style Groove Agent SE drum machine. The plug-in suite covers everything from guitar-amp modeling and convolution reverb to precise EQs and analytical metering. Cubase Pro 8.5's global Chord Track is like a chord guide for your project. It integrates seamlessly with Cubase's VariAudio. Just change the Chord Track, and your MIDI and audio tracks will adjust themselves to match the new chord changes! Also, Cubase's Chord Assistant makes it easy for students to find new chord sequences. The more-streamlined **Cubase Artist 8.5** includes several of Pro 8.5's features at an incredibly low price. Call us today to find out more.

|||≡ Ableton Push 2

Pad Controller and Control Surface with Ableton Live Software

Ableton's **Push 2** pad-based instrument controller/control surface and included Ableton Live software combine to give your music program a formidable creative resource and a fantastic tool for live performances. With a matrix of 64 fantastic-feeling touch- and velocity-sensitive pads, eight multipurpose encoders, and all the dedicated controls you could ask for, Push 2 gives you and your students all-access command over Live. Play virtual instruments, track beats, step sequence, and navigate with ease — all at once — from the Push 2 control surface.

Push 2's array of 64 touch-sensitive pads allows you to control the expression of tonal instruments by varying the pressure under your fingertips. In addition to using the entire matrix to trigger scenes and launch clips, depending on your mode, you can use quadrants to control various functions. For example, one quadrant can act like the 16 pads of a traditional drum controller, and another can provide loop navigation. You can then combine two sections to form a 16-beat step-sequencing grid. Or you can set the entire matrix to act like the notes of a traditional keyboard and "color" only the notes that are in a particular key. Push 2's touch-sensitive encoders and additional controls provide complete access to Live software, and a high-resolution screen provides a detailed view of waveforms and other information.

Push 2 comes in three different bundles: one with Live 9.5 Intro software, one with the even more powerful Live 9.5 Standard, and one with the complete Live 9.5 Suite. Call us today to find out which Push 2 system best fits your program's needs.

Push 2 is available in Live 9.5 Intro, Standard, or Suite bundles.

MOTU

Digital Performer 9 Features:

- Easy-to-understand interface, functions, and menus
- Create your music "inside the box" from recording to finished product
- Powerful audio- and MIDI-editing tools
- Flexible user interface works your way
- Loaded with virtual instruments, processors, and other useful tools

Digital Performer 9 Multitrack Production Software

MOTU's **Digital Performer 9** gives you an amazingly comprehensive and easy-to-manage platform for audio recording, film scoring, MIDI sequencing, and more. Thanks to its clear and concise graphics, effective features, and manageable workflow, it's also a perfect DAW platform for beginners.

Plus, Digital Performer 9 gives you unlimited tracks! Features such as unlimited

undo capability and incredibly accurate audio and MIDI editing provide complete control over your content. DP9 makes it easy to fix, shape, and manipulate what you've recorded until you get the results you want. A flexible interface that you can arrange to suit your workflow lets you create music without constantly referring to a manual, so everything's a snap — whether you're scoring notation, working on a loop-based music production, sequencing MIDI tracks, or simply writing a song that you want to burn to a CD. And Digital Performer comes loaded with virtual instruments and signal processors, so you have all the tools you need. The latest version of DP includes several new features, instruments, and improvements. You get the new MX4 Multi-synth instrument, new plug-ins (plus a handy new floating plug-in window), and a MIDI Learn function that maps your controller's hardware controls to DP's plug-in parameters. A Spectral Display feature allows students to analyze frequency content, while a Create Tracks command lets students add multiple tracks in one step. This just scratches the surface of what the new DP has to offer; call us today and get all the details.

What is a virtual instrument?

Virtual instruments have opened a whole new world of sonic possibilities for musicians. When combined with your laptop or desktop computer, a virtual instrument can deliver authentic re-creations of vintage analog synths, totally new digital sounds, or realistic emulations of acoustic instruments. Most virtual instruments can act as standalone applications or as plug-ins with your choice of host applications, such as Pro Tools, Digital Performer, SONAR, and others. Adding virtual instruments to your school's music lab is one of the easiest and most affordable ways to introduce a wide variety of music instruments (and hours of creative fun) to your students!

NI Komplete 10 Ultimate

Virtual Instrument Sampler, Synth, and Effects Collection

Komplete 10 Ultimate makes an ideal sound library for your audio lab. Komplete 10 Ultimate equips your students with incredibly innovative synthesizer engines plus a whopping 440GB of cutting-edge sample libraries. With over 17,000 sounds available, your students will probably never run out of fuel for their musical explorations. You get 1,300 sounds from a core group of amazing instruments, and included processors and effects let students tweak and refine the sounds they produce and play. Komplete 10 Ultimate includes a total of 77 incredible products — inside one collection. The more streamlined **Komplete 10** offers several of Komplete 10 Ultimate's impressive features, at a great price.

The 25-key **Komplete Control S25** keyboard controller interfaces directly with NI Komplete instruments, making it easy to find the sound you want, adjust parameters in real time, and create music in your DAW. This purpose-built controller includes an easy-to-navigate browser, dedicated transport controls, and more. Also available in 49- and 61-key versions. Call us for details.

EZkeys Essential Pianos

The Easy Way for Your Students to Add Stunning Pianos to Their Projects

You don't need an expensive piano or complicated keyboard to get the sounds you want in your lab or classroom projects. With the Toontrack **EZkeys Essential Pianos** plug-in in your music lab's DAW, you and your students are only minutes away from adding professional-sounding piano tracks to your productions. Here at Sweetwater, we've heard rave reviews from musicians and engineers, hailing EZkeys as the easiest, most musical plug-in they've ever used. Now, EZkeys Essential Pianos combines the winning plug-in with a host of instrument libraries that will cover all your tonal needs. This plug-in is incredibly easy to use: just pick your instrument, browse through a library of professionally performed MIDI loops and phrases, select your key, and drag and drop the results into your DAW.

This plug-in features a stellar Steinway Model D grand piano, renowned the world over for its sound. Toontrack loaded this piano with 14 presets, including customizable effects chains for an even greater variety of sounds. You also get an Östlund & Almquist upright piano plus legendary Rhodes and Wurliitzer electric pianos. The Steinway Model D is also available separately in the **EZkeys Grand Piano** plug-in.

EZmix 2

Great-sounding Mixes Made Easy

Do you want to give your students an easy way to craft great mixes? The **EZmix 2** mixing plug-in is the tool your music lab needs. Simply insert the EZmix 2 plug-in on any channel in your DAW and tell it what kind of signal it's working on. EZmix 2 will pull up a custom processing chain that's optimized for drums, vocals, guitar, or whatever you tell it to process. For example, when you add EZmix 2 to a vocal track, a preset will pull up a compressor, a parametric EQ, a tape delay with mix control, a reverb with mix control, and a limiter.

EZmix 2 is ready to work with virtually any DAW software you use. It supports AU, VST, and RTAS plug-in formats on Mac and PC. And it's CPU efficient too! Because all your processing occurs in one instance of EZmix 2, it's easier to get great mix results on low-resource mixing systems. So you can install it in your lab or classroom computer with confidence. Best of all, you get this fantastic mixing tool at a price that won't make a big dent in your program's budget.

OneKnob Series

Intuitive, Simple-to-use Sound Processing

The pros know that workflow is important. And one way to improve a project's workflow is to streamline the process — without skimping on quality. Give your students a set of processing tools that lets them channel their creativity with a minimum of tweaking! The Waves **OneKnob Series** plug-in bundle redefines the phrase "easy to use." With only one knob per effect to dial in, they'll spend more time creating and less time twiddling multiple virtual knobs. Waves created the OneKnob bundle to provide stellar Waves audio quality in their easiest to use format yet. The OneKnob bundle consists of eight distinct processors (Brighter, Phatter, Filter, Pressure, Pumper, Louder, Driver, and Wetter). As the bundle's name implies, each plug-in has one single knob to tweak, but the results are amazing! There doesn't seem to be a "wrong" setting for any of these processors. With mono, stereo, and mono-stereo components, your students will be able to quickly and intuitively add vibe to any type of audio.

TOONTRACK

EZdrummer 2

Put Great Drum Sounds to Work in Your Lab or Classroom

Toontrack's **EZdrummer 2** gives your students the software they need to add realistic drums to their projects. It's three amazing tools in one: a phenomenal drum and percussion virtual instrument, an expansive library of MIDI grooves, and an environment that lets you combine these sounds and MIDI grooves to create perfect drum tracks for any style of music. At Sweetwater, we've been using Toontrack products like EZdrummer ever since they were introduced, and we can safely say that EZdrummer 2 is by far their most impressive release yet.

Students can generate complete drum tracks from a vast collection of templates right inside the computer, arrange and manipulate individual grooves and fills in real time, or even connect an electronic drum kit and create their own grooves using the outstanding drum sounds. An all-new audio engine makes EZdrummer 2 more expressive and realistic than ever, and a mix engine based on Toontrack's EZmix 2 lets your students get the ideal sound for any music project. Call us now and get all the details!

Elevate Student Success

Discover how you can help your students achieve their dreams

What does it take for students to realize their full potential? Creative teaching programs, cutting-edge technology, and dedicated faculty like you. That's why the world's leading educators—from top universities to K-12 institutions—choose Avid® products to inspire creativity and empower the next generation of artists, musicians, producers, engineers, composers, filmmakers, editors, and creative professionals.

From award-winning Pro Tools® and Sibelius® to Media Composer®, Avid's industry-standard audio and video tools enable your students to learn real-world skills, using the same tools the pros use to create your favorite songs, soundtracks, movies, and TV shows. Help put your students on the right path—maximize their career opportunities by integrating Avid products into your school curriculum.

Why choose Avid?

- Give students the edge by teaching tools that are proven, trusted, and used throughout the music and entertainment industry
- Streamline your education environment with integrated creative tools that all work together
- Keep students engaged with tools that inspire creativity and deliver maximum efficiency
- Get deep discounts on Avid products and subscriptions for students, teachers, and educational institutions
- Start learning using free versions of Avid's industry-standard tools

“Knowing how to use Avid solutions is a prerequisite for working in the media and entertainment industry.”

– Jennifer Bryant, production specialist, Ponitz Career Technology Center of the Dayton Public School District

“We couldn't do what we do here without Avid.”

– Meri Weingarten, director of post production, USC School of Cinematic

“As far as the job market is concerned, there really is no second choice; there's just one choice—period. Learn Pro Tools.”

– Craig Abaya, professor, Digital Media Program, San Francisco State University

“Avid has been a great partner in providing solutions for our students that reflect what's being used in the industry.”

– Robert Bassett, Dean, Dodge College of Film and Media Arts, Chapman University

Pro Tools—More choice, infinite possibilities

Walk into just about any professional recording studio around the world and you'll find one universal thing in common—Pro Tools. As the software that redefined the industry, Pro Tools fuels creativity, providing everything you and your students need to teach or learn how to create music and audio for albums, film, television, and more.

Pro Tools 12 for Education introduces Avid Cloud Collaboration and includes more advanced audio tools than ever before. Create with a low-cost annual subscription or purchase and own the software outright. Or get started with Pro Tools | First, a free version of Pro Tools. The choice is yours.

With Cloud Collaboration for Pro Tools, you and your students can collaborate with other students and teachers anywhere in the world—as if you're all working together in the same classroom or studio. And through the Avid Artist Community, students can share their work and make connections that open doors to collaborating with other Pro Tools artists, musicians, producers, engineers, voice actors, and more—no matter where they're located.

Sibelius—The fastest, smartest, easiest way to write music

Sibelius is the world's best-selling music notation software, and now you can compose with a low-cost subscription or purchase and own the software. It's the best choice for learning and teaching music notation, composition, and theory, as the software includes special classroom tools, including over 1,700 ready-made teaching materials in the Worksheet Creator (from worksheets, projects, and exercises, to songs, instrumental pieces, lyrics, and more) and easy classroom control, plus integration with Pro Tools.

Media Composer—The professional's choice for creative editorial

From big-budget blockbusters, indie films, and documentaries, to scripted shows, reality TV, music videos, and news programs, more professional editors choose Media Composer than any other editing solution. That's because Media Composer simplifies and accelerates the entire editorial process, enables real-time collaboration, and provides the perfect environment for teaching and learning how to work with SD, HD, 2D, 3D, high-res, and HDR material. Plus, you can choose to create stories through a low-cost subscription or own the software outright.

Redefine Your Music Lab with Pro Tools Software!

As the industry-standard DAW software, Avid Pro Tools® software is truly in a class of its own. That means when you add this amazing audio production system to your music lab or recording program, your students will develop valuable skills they'll take with them for the rest of their lives. From its straightforward user interface to its vast selection of available plug-ins, Pro Tools gives your students access to all the features and functions they need. And when you break it down into its various uses, including music recording, audio editing, scoring, MIDI composition, sound design, audio for video, and more, Pro Tools software makes creating a well-scaffolded audio production curriculum easy!

The Industry-standard DAW

Found in more professional studios than any other DAW, Pro Tools is the hands-down industry standard when it comes to music recording, editing, and overall production. More than 20 years of steady innovation and

breakthrough advances in recording technology have kept Pro Tools on the bleeding edge of the constantly evolving music industry. With Pro Tools, you get more than a great set of recording tools; you get a complete audio production system!

Perfect for Music Production and More

Pro Tools software began life with a strict focus on recording, but in the past decade, this amazing software has grown impressively. Versatile post-production and sound-design tools have made Pro Tools a standard part of professional film and video production. Powerful virtual instruments, a flexible MIDI engine, and a scoring editor (plus seamless integration with Avid's Sibelius® scoring software) have also made Pro Tools a favorite among today's top music composers and producers.

ProTools | First

Pro Tools | First in the Classroom

Pro Tools® | First gives students what they need to begin recording, composing, and producing music. Because you can plug into Pro Tools | First through an audio interface or even straight into your computer, it's incredibly easy to get started. And since Pro Tools | First is free to download, it's the perfect way for students to learn their way around this amazing software.

Features and Benefits

- A feature-limited version of Pro Tools that's free to download and explore
- Loaded with quality plug-in processors and virtual instruments
- MIDI editor, loop recording, and more
- Allows connection via an audio interface directly into your computer
- Supports third-party plug-ins, allowing you to expand your system

USE PRO TOOLS® | FIRST WITH YOUR FAVORITE INTERFACE!

Ultra-fast, Streamlined Workflow

Pro Tools software's success lies in its intuitive, straightforward user interface. The simple two-window layout provides you with enough screen real estate to access your tools — without causing you to lose sight of your overall project. You can also access most Pro Tools functions and features in multiple ways, including using one or two keyboard commands, clickable icons, or selections from a drop-down menu. This functionality allows you to quickly establish a comfortable workflow, without worrying about remapping keys or setting preferences when you move from one system to another.

Skills That Go Beyond Your Music Lab

The Pro Tools workflow remains consistent from one version to the next, all the way through the entire Pro Tools lineup. So, if your students start by learning their way around the Pro Tools | First systems in your music lab and then go on to explore full Pro Tools systems on their own, they can apply everything they've learned directly to their new systems. And the same would be true if they made the jump from Pro Tools software directly to a Pro Tools | HD software system in a professional studio! So, when your students learn Pro Tools, they're building valuable skills that will stay with them throughout their lives.

Systems to Fit Any Budget

Whether your program needs simple workstations that will let your students discover the basics of DAW recording or studio-level systems capable of full-scale music and media production, there's a perfect version of Pro Tools for you. And with tons of rock-solid plug-ins, control surfaces, and upgrade options available, your Pro Tools system can easily grow to meet your future needs.

What's the Difference?

	Pro Tools® First	Pro Tools®
How many total audio tracks can be added per project?	16 mono or 16 stereo	96 mono or 96 stereo
How many audio tracks can be recorded simultaneously?	4 tracks	32 tracks
What is the maximum sample rate I can record at?	96kHz	192kHz
Includes AAX plug-in support?	Yes	Yes
Has automatic delay compensation been included?	Yes	Yes
How many projects can I create?	3	Unlimited
Are Core Audio/ASIO interfaces supported?	Yes	Yes
iLok required for copy protection?	No	Yes. iLok 2nd Generation 

Advanced Cross Compatibility

Pro Tools is not just cross-platform compatible; it's cross-version compatible. So, if students in your music lab are working on a laptop PC running Pro Tools, they can easily take their sessions to a Mac running Pro Tools | HD software.

More Than a DAW, It's a Community

Online, you'll find over two decades' worth of Pro Tools experience — power users who are ready to help you with any question you may have. Add that to Sweetwater's amazing support staff and the invaluable knowledge of our Sales Engineers, and you can't go wrong with Pro Tools systems!

Pro Tools® software upgrades require iLok 2nd Generation

Pro Tools

Pro Tools in the Classroom

Pro Tools® software is the go-to DAW software for everyone from power users to professional studio owners. By adding the full version of Pro Tools to your media-production or recording program, you're offering your students the chance to develop the real-world skills and workflow they need to turn their passion into a profession. This flexible recording software comes with a complete set of over 75 plug-ins and virtual instruments. Beat Detective lets your students dive into multitrack timing correction, and they also get access to invaluable tools for media production, such as Clip Gain and time-code synchronization. In short, Pro Tools provides your students access to the tools and flexibility they need to create original compositions, produce full-scale music recordings, and develop sound designs and scores for video post-production projects.

Features and Benefits

- Gives your students access to all the tools they need for recording, music composition, and media post production
- Powerful 64-bit application
- Includes over 60 professional-quality plug-ins and virtual instruments
- Provides a full set of editing tools, including multitrack Beat Detective
- New Avid Video Engine for HD video editing and playback
- Works with any Core Audio-compliant or ASIO-compatible interface
- Faster-than-real-time Offline Bounce
- Avid Audio Engine lets you work with more virtual instruments and effects than ever

Bring the Power and Flexibility of Avid's Pro Tools® Music Production Software into Your Program

Pro Tools Perpetual License

A Pro Tools Perpetual License comes with a 12-month Avid All Access plan. Not only does this provide upgrades for a year — far better than any “amnesty” deal out there — but it also comes with access to 24-hour customer support, 17 bonus plug-ins, and a wealth of additional resources. The plan is renewable on a yearly basis for a moderate fee, and if you decide not to renew, then you keep your system and all the upgrades you already have.

Pro Tools Software Subscription Service

Available on a yearly or monthly basis, the Pro Tools Software Subscription Service allows Pro Tools software users to pay as they go and only when they need access to Pro Tools. This plan includes both upgrades and support, providing you with access to the latest features and capabilities. You can cancel the subscription if you don't need Pro Tools for a period and then start up again next time you have a project.

Costs	Pro Tools Subscription*	Pro Tools Perpetual License**
Monthly	\$24 ⁹²	N/A
Yr. 1	\$299	\$899
Yr. 2	\$598	\$1098
Yr. 3	\$897	\$1297
Yr. 4	\$1196	\$1496
Yr. 5	\$1495	\$1695
Yr. 6	\$1794	\$1894
Yr. 7 (Break even)	\$2093	\$2093

* Monthly cost based on annual subscription rate

** Includes annual cost of renewing upgrade and support plan

Avid Cloud Collaboration

Avid Cloud Collaboration for Pro Tools changes the way engineers, composers, and artists work together, by providing an online network for project collaboration that interacts directly with the media production tools you already use. Share projects and manage assets — in one spot. With all the possibilities that Cloud Collaboration promises, there's a lot to look forward to in the world of Pro Tools. Call your Sweetwater Sales Engineer to find out more.

COMES COMPLETE WITH A 1-YEAR SUBSCRIPTION TO PRO TOOLS® SOFTWARE!

Pro Tools | Eleven Rack

Recording Interface/Guitar Amp Emulator with All Your Favorite Guitar Sounds in One Box

Avid's Pro Tools® | Eleven® Rack is a truly unique piece of audio equipment for your music lab and classroom — and beyond! First, the Pro Tools | Eleven Rack is a fantastic guitar multi-effects unit (with emulations of several of the most popular vintage and modern guitar amps out there) that gives guitar-playing students live access to the power of Avid's Eleven plug-in software for Pro Tools; in fact, the hardware comes with the sounds preinstalled, so you can access those great tones, standalone. It's perfect for recording, rehearsing, and even performing live. Eleven's effects and amp models make it possible for students to play all kinds of styles.

But the Pro Tools | Eleven Rack is much more than an effects unit. It's also a complete audio interface that includes a one-year subscription to powerful Pro Tools® software — plus the analog and digital inputs and outputs you need to connect in your lab. In addition, you get an Eleven Rack Editor and a full version of Avid's Eleven Rack Expansion Pack, which adds even more tones, effects, and other features to an already impressive setup. Now, it's easier than ever to plug into the power of Pro Tools! Call us today to get all the details.

iPad not included

Now that Pro Tools® software has expanded your students' control options even further via iPad, Avid adds another level of convenience and hands-on command. The **Pro Tools | Dock** integrates with your iPad, extending the Pro Tools | Control iOS app's functionality with transport controls, a jog wheel, and automation controls. A channel fader, color-matched soft keys, and soft knobs round out the Pro Tools | Dock's functionality.

You can use the Pro Tools | Dock as a standalone device or in conjunction with your program's Pro Tools | S3 or Artist Mix control surface, for even more ergonomic, tactile control over your DAW. And when used with an S3, the Pro Tools | Dock provides many of the center section functions of Avid's class-leading S6 control surface, such as a channel view for editing inserts, sends, pans, and more in a compact form factor. Call Sweetwater today for all the details!

- Over 1,700 ready-made worksheets, projects, and exercises

Sibelius 8 Music Notation Software

Avid **Sibelius® 8** is the complete software for writing, playing, printing, publishing, and sharing music notation. It lets you express, accelerate, and promote creativity in more ways than ever before. An exceptionally intuitive user interface features tabs that lead you and your students through the process of creating a score from beginning to end. And playback will sound better than ever, with over 36GB of samples and content — from symphonies to rock bands.

Sibelius easily imports all major formats of graphics, so you can easily create teaching materials, books, and projects. Sibelius 8 has been optimized for the Microsoft Surface Pro 3 tablet, enabling you to add and edit notes quickly with just a tap of the pen, as well as play music in real time using the tablet's onscreen keyboard and fretboard. Plus, if you're working on a laptop with a trackpad or using a Surface Pro 3, you can quickly zoom in and out of your score by simply using a pinch-zoom gesture, making navigation and editing easier. A new Annotate feature lets you create reminders for yourself about music changes as you're composing or communicate edits and feedback to students, streamlining collaboration and review.

Sibelius runs in a native 64-bit environment, so you can use the full power and memory of your computer to create scores. And once your score is finished, you can send it for further audio tweaking to any DAW that supports ReWire. Sibelius supports third-party VST/Audio Units effects and instruments for a broader tonal palette, and it lets you import from and export to any notation software that supports MusicXML. You can also share online, via ScoreExchange.com, YouTube, Facebook, and SoundCloud. Create scores, quizzes, and instructional materials for your classes, all within the same program. An annual subscription to Sibelius 8 is also available.

NEURATRON
 RECOMMENDED BY NEURATRON

PhotoScore Ultimate 8

Optical Sheet Music Recognition and Transcription Software

You and your students can save time and avoid the tedious task of entering sheet music into arrangement programs by hand, with Neuratron's **PhotoScore Ultimate 8** music-scanning software. PhotoScore Ultimate 8 uses Neuratron's dual-engine OmniScore² optical-recognition system for 99.5% transcription accuracy on most original sheet music. It picks out nearly every detail, including slurs, dynamics, tabs, chord diagrams, and 4- and 6-line guitar tablature — as well as 1-, 2-, and 3-line percussion staves. PhotoScore Ultimate 8 reads printed sheet music quickly and accurately, and handwritten score scanning lets you write music anywhere and then scan it into PhotoScore at your convenience. Neuratron's NotateMe music handwriting app is now integrated into PhotoScore Ultimate 8, so you can handwrite scores on your computer or tablet and easily digitize them. This software includes many more features; call us today for all the details.

Finale

Notation Software with Instrument Sounds

Finale provides students with an intuitive and easy way to create and manipulate scores, freeing them to concentrate on their compositions. All the tools students need to quickly and easily bring their music to life are right at their fingertips — and they can instantly hear amazingly humanistic playback, thanks to the built-in instrument player. Students can enter notes in a variety of ways, from using a MIDI controller to using the innovative MicNotator to scan the score into the computer. They can also record their own audio straight into Finale. Now, you can use Finale to create tablature for a wide range of fretted instruments, and you can input music via tablature and later create notation for other instruments. Finale exports compositions in a variety of file formats, so students can burn their results onto CDs. A downloadable NotePad feature and SongBook iOS app make it easy to access and share music and files. Other expanded content includes a library of over 1,000 classroom-ready music education worksheets designed for

K–12 students. These worksheets include material that’s appropriate for general music, theory, band, orchestra, and choir classes.

SmartScore Scanning and Notation Software

SmartScore gives you one of the fastest and most accurate ways to enter music into a computer. Once in the computer, the score is on-screen and ready to be edited or played in seconds. SmartScore boasts better than 99% accuracy in recognition of symbols and notes, and playback is both realistic and accurate. You can use SmartScore to transpose sheet music so that it fits the range of your students' instruments or voices.

In addition to transposing the score, SmartScore allows you to assign different instrument sounds to the parts, with a single click. As a score editor, SmartScore lets you take a complex piece of music and tailor it to your students' abilities and interests, making learning music more fun for them. You can easily create a track to burn to CD or to transfer to a portable device, such as an MP3 player.

SmartScore is also available as a 5-pack for labs. Call Sweetwater today and find out how SmartScore can make your music program even more effective.

3D Basic

Drill-design and Practice Software for Mac/Windows

3D Basic from Pyware® is the newest, most affordable fully functional version of the standard drill-design software used by high schools, universities, and corps worldwide. This premium software is packed to the brim with features that let you put together, view, and practice drills of all types and levels of complexity. Count-to-Count technology allows you to view, edit, and print out any count of the drill at any time. **3D Interactive** builds on Basic, adding the Drill Explorer and the downloadable 3D Performance Simulator, which allows you to zero in on a performer's place in a drill. Performers can view, practice, and print out their own drills at home. The Director's Viewer allows drill directors to download and view drills from other directors and designers, animating and printing out coordinates and handy thumbnails. **3D Professional** includes the same features as 3D Interactive, plus it adds all the Pygraphics plug-ins, including Floor Covers, Traditional Design Tools, the Personal Drill Book Printer, and the Spiral Tool. You can draw, edit, label, and manipulate drills with any version of 3D!

3D Features:

- Versatile, detailed animations
- Count-to-Count function for flexible viewing and editing
- Grid designer
- Uploadable/downloadable drills for performers, students, and clients
- Director's Viewer
- Real View poses and animations
- Multi-cam views

3DJavaPro	3D Professional..... List \$1199 ⁰⁰	\$1079 ⁰⁰

3D Real View

3D's powerful Real View perspective window lets you visualize your drills with incredible 3D animations. This amazing feature gives you all the tools you

need to get a comprehensive and detailed view of your drills. Multiple camera views (complete with panning options) let you see your drills in action from every angle. You can zoom in and out of the action to pinpoint particular elements or get a "big picture" overview. You can label performers for an even greater degree of control. Real View even allows you to choose the animated performers' uniforms, the flag silks, the playing surface, and more.

Choose 3D Professional and Get These Powerful Plug-ins:

Personal Drill Book Printer

This plug-in allows you to create and customize drill books for each performer. By providing coordinate sheets and pathways, you give performers the clearest drill instructions and information possible.

Spiral Tool

Use the Spiral Tool plug-in to easily create spiral shapes in your drills. You get all the tools you need for smooth transitions, performer selection, positions, and more. The Spiral Tool even has special tools to help first-time performers.

Traditional Design Tools

Perfect for military corps-style drills! The Traditional Design Tools plug-in gives you a host of resources, including Sequential Push, Counter March, Parade Gate, and a Traditional tool (for custom transitions).

Floor Covers

You can use existing surface markings to your advantage, thanks to the Floor Covers plug-in. This tool lets you place field logos, floor markings, and other characteristics under your grid.

Orchestra Light

Light Up Your Music Stand with Nine LEDs

Use the Mighty Bright **Orchestra Light** to help your students see better onstage. This 9-LED clip-on light sturdily attaches to your music stand to illuminate your music. Two light settings give you just the right amount of light, and a shade on the back ensures that your Mighty Bright Orchestra Light won't glare toward the audience.

OrchLightLED Clip-on Music Stand Light... List \$74⁹⁹ **\$59⁹⁹**

Encore Light

This 6-LED Light Works on Stands and on Desktops

This clip-on light safely attaches to your music stand; it also sits right on a desktop. You'll appreciate the Mighty Bright **Encore Light's** included AC adapter cord for long practices and performances, although you can power it with the three included AAA batteries. Two settings give you just the right amount of light.

EncoreLight Clip-on Music Stand Light..... List \$44⁹⁹ **\$35⁹⁹**

HammerHead LED

Compact, Affordable, and Bright Clip-on Light

Lightweight, bright, flexible, and affordable, the **Hammerhead LED** music light provides an effective light source for music stands or low-lit backstage situations. Its strong clip makes this light stay put, so it's there when you need it most.

HammerHead Clip-on Music Light..... **\$19⁹⁹**

Duet2

Music Stand Light with Dual LEDs

This dual clip-on gooseneck light illuminates your music stand brightly and effectively, with no "hot spots." The **Duet2** offers a tap-on function, flexible positioning, and four different level options. Call us today!

Duet LED

Flexible Dual LED Lights Give You the Lighting Options You Need

The **Duet LED** music light suits an array of different lighting needs. You can push, pull, bend, or twist the two gooseneck arms for powerful LED light anywhere you need it. The weighted stand ensures stability while free-standing, and the clip opens wide enough to secure to a music stand, laptop, or desktop.

Duet2LED Dual-head Music Stand Light..... List \$39⁹⁹ **\$31⁹⁹**

DuetLED Duet LED Music Light..... **\$19⁹⁹**

XtraFlex Super LED

Bright, Versatile Light, Great Value

Perfect for music stands, great for dark backstage areas, and more! The **XtraFlex Super LED** puts out as much light from a single LED lamp as three regular LEDs. A special lens design distributes the light evenly, too. Its strong clip makes this light stay put, so it's there when you need it most. Three AAA batteries are included, and the lamp gives you up to 40 hours of life from them.

ClipLightLED Clip-on Music Light..... **\$11⁹⁹**

MANHASSET

Fourscore Stand

Adjustable Conductor's Music Stand

This stable **Fourscore Stand** offers a generous 32" desk that can accommodate up to four pages of music side by side. It's perfect for conductors, instructors, groups, and more. The highly portable Voyager Stand features a folding base.

M51 Fourscore Stand..... List \$109⁹⁹ **\$79⁹⁹**
 M52 Voyager Stand..... List \$102⁹⁹ **\$59⁹⁵**

On-Stage Stands

SM7312W Conductor Music Stand

Adjustable Music Stand with Folding Base

The striking **SM7312W Conductor Music Stand** features a classy wooden back plate and a very handy folding base with stay-put rubber feet.

WHAT OUR CUSTOMERS SAY ABOUT SWEETWATER

“ Very good job! I was blown away by the confirmation telephone call I received to ensure that my purchase arrived on time! Very impressive! ”

— Tyler Martin
Ball State University, Indiana

“ Shortly after I placed my order, I received a phone call to verify information, and the representative I spoke with was friendly and helpful. Good products, good prices, good people. ”

— Kimberly Le
Rawlinson Road Middle School, South Carolina

“ My order was processed, and I was notified, so I knew when to expect it. Great customer service and quality products with excellent prices. ”

— Andy Micciche
Windsor High School, Virginia

Visit Sweetwateredu.com to see even more products! Our comprehensive website also offers reviews and additional resources to help you with your music education technology and gear needs!

30-day Money-back Guarantee

If you are not satisfied with your product, then call us at (800) 822-6752 for a return authorization number. Then return the product to us within 30 days of the original shipping date. We will gladly refund your money or give you store credit for the price you paid, subject to the following exclusions: Federal copyright regulations prohibit the return of opened software. Software returns can only be accepted if the product is defective. Please call before you send the defective software back. In most cases, the publisher can exchange your defective software directly. Returned items must be in "like new" condition, in the original packaging, with all documentation. Items returned with excessive wear will result in a minimum 15% restocking fee. Refunds do not include shipping-and-handling costs.

Nonreturnable items include opened computer software, special-order items, sound cards, videos, computers, opened sets of strings, and books.

Disclaimers and Other Useful Information

Sweetwater is committed to providing the best shopping experience in the industry. If you have questions or concerns, then please call us at (800) 822-6752.

- We strive to make this catalog as accurate as possible. However, prices change, products become discontinued, and misprints can happen. All product prices, specifications, and images are subject to change without notice.
- Many lines we carry, including all Roland, BOSS, Edirol, and Yamaha products, may be sold and shipped only in the United States of America and its territories.
- If you return your purchase, the cost of shipping will be deducted from any refund or credit.
- All trademarks, registered names, brands, and logos are the property of their respective owners.
